What is Stormwater Runoff?

Stormwater runoff is the water that flows off roofs, driveways, parking lots, streets and other hard surfaces during rain storms. Instead of infiltrating into the ground, it flows into storm drains.

What falls in here,  ends up here.

Stormwater runoff receives **NO TREATMENT** before entering waterways, and it might contain toxic substances such as solvents, oils, heavy metals, and washing fluids.

Do you own an Automotive Related Business?

Automotive Related Businesses (ARBs) are any facility whose overall business is repairing, maintaining, painting, salvaging, or selling automobiles or parts.

In many communities, ARBs represent some of the largest contributors of hazardous discharges and are required to ensure that none of this waste is released into the stormwater system. Legal ordinances have been developed to prohibit these discharges.

Ways Your Business Might Pollute Stormwater

Allowing vehicle fluids to fall to the ground and wash away.

Improper storage of waste fluids.

Improper vehicle washing outdoors.

(Your Cities)'s Ordinance

It is the responsibility of your business to ensure that only rainwater enters the storm drains in your city.

How You Can Prevent Stormwater Pollution

Chemicals, paints, oils and any other material that could wash off-site should be correctly stored or protected.

Do not let water from washing, discharge points, oil traps, filters and separators run to stormwater drains.

Ensure that appropriate spill response equipment is available and accessible at all times.

How Your Business Can Benefit

Increase your clientele.

Customers appreciate a professional, clean, and environmentally friendly business.

Save money

Avoid cleanup costs and fines by keeping work areas clean for your business.

Protect the environment

We all deserve to live in a community that has clean water, free from toxic substances.
