1. Are there items missing from the proposed criteria that should be considered?

1	anonymous	Sedans
2	anonymous	Great Presentation, thankyou for the info
3	anonymous	Ability and demonstrated commitment to act quickly tends to be missing from most scoring criteria for programs like this.
4	anonymous	TCO analysis is key. Completing projects that create an environment where the cost of ownership is higher than ICE is something we have to avoid. Without the right tools this is going to happen on most projects. One to one ICE to EV and One to One Charger to Vehicle is 100% not the answer.
5	anonymous	Define 'Repower' as being 'used' or 'registered ' vehicle Including new chassis converted to Fuel cell vehicle allows for very cost competitive and more variants for the fleets

2. Should the allocation of points be shifted between proposed scoring criteria?
