# Overview

## Fundamentals of TMDL

### Pollutant Load Allocation

### Equation

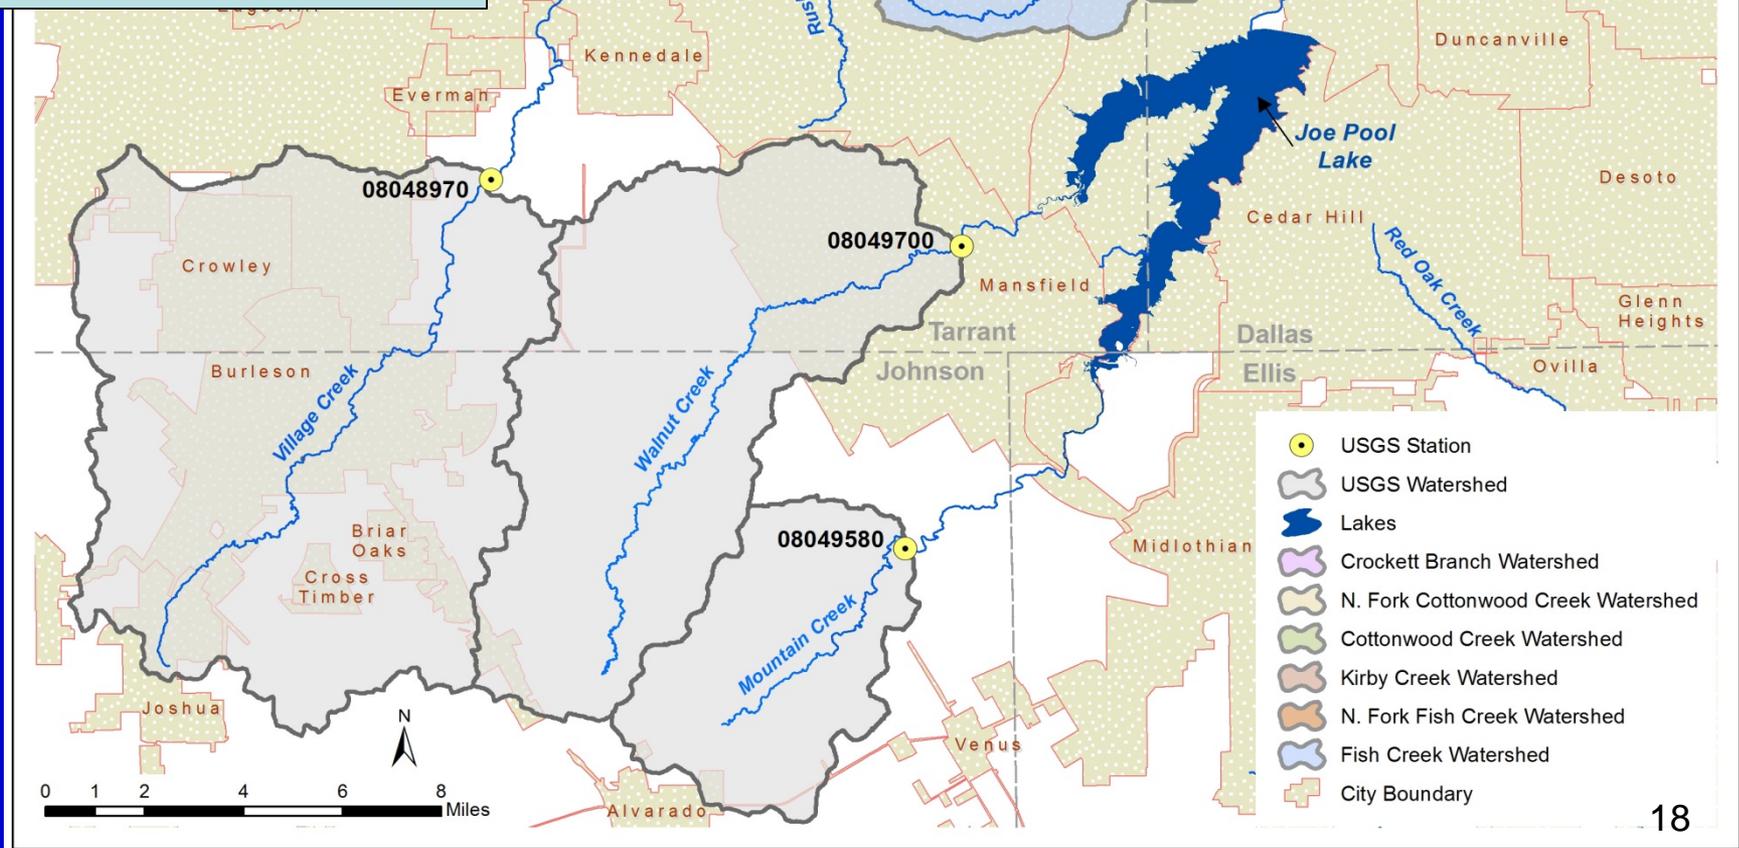

# TMDL Allocation Equation

$$\text{TMDL} = \cancel{WLA_{\text{WWTF}}} + WLA_{\text{SW}} + \cancel{LA} + LA_{\text{TRIB}} + \cancel{FG} + \text{MOS}$$

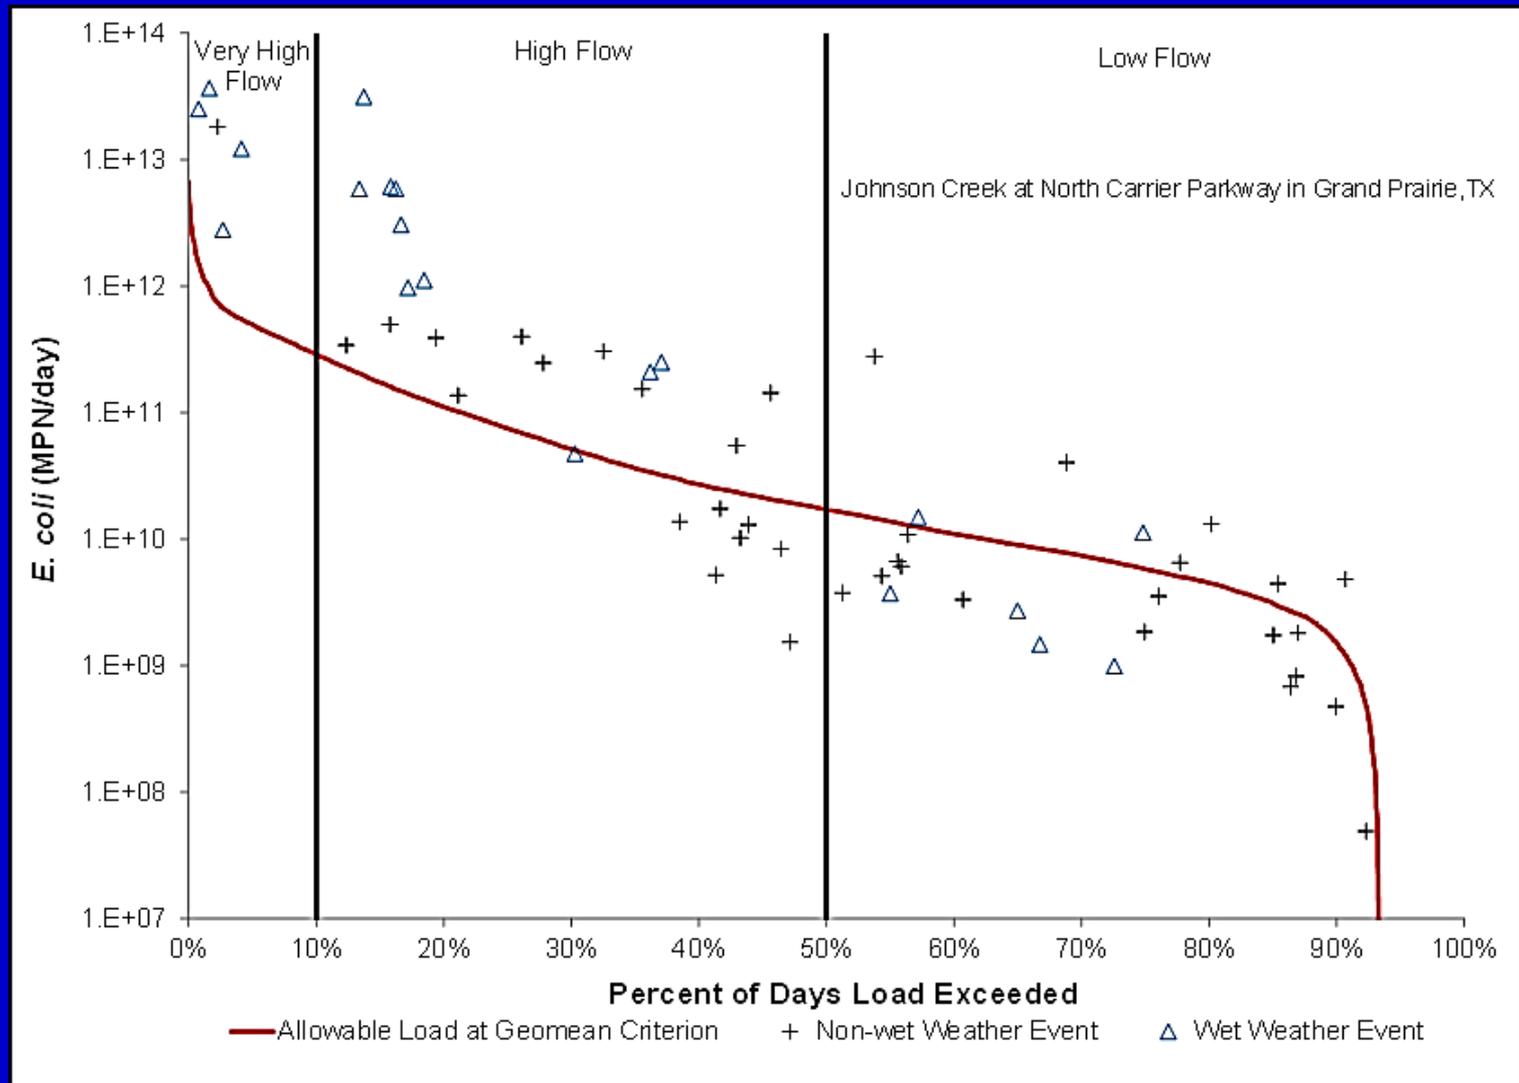

The equation shows the TMDL allocation with several terms crossed out. Arrows point from the zeroed-out terms to a '0' above or below them:  $\cancel{WLA_{\text{WWTF}}}$  has an arrow pointing to a '0' above it;  $\cancel{LA}$  has an arrow pointing to a '0' above it; and  $\cancel{FG}$  has an arrow pointing to a '0' below it.

- $WLA_{\text{WWTF}}$  - Existing wastewater treatment discharges.
- $WLA_{\text{SW}}$  - Construction, industrial and MS4 discharges stormwater loading.
- LA - Unregulated stormwater loading.
- $LA_{\text{TRIB}}$  - Loading from TMDL tributary.
- FG - Future growth from potential permitted facilities.
- MOS - Margin of safety.

- Technical Support Document (TSD) (due to TCEQ July/Aug 2015; soon thereafter made available to public on project website)
- TCEQ to use TSD to develop a TMDL report (TCEQ will notify TMDL Coordination Committee when this is available for public review and comment)
