“One minute saved in emergency response is 10,000 lives saved in a year.”

- An estimate by the FCC

Fugro's RapidSOS-ready SIMmetry™ connects common geospatial data into a 3D environment with easy-to-use tools for improved situational awareness enabling rapid response times for emergency dispatchers helping save lives.

3D visualization of community data

Connect to RapidSOS-ready SIMmetry™ 3D GIS

Access GIS tools for addressing, measuring, and interaction

Precisely locate a caller in a 3D environment

Provide locational intelligence to responders at the scene

Enable ECC operator to enter 3D immersive world to improve situational awareness, helping reduce response times and ultimately save lives

The Federal Communication Commission (FCC) estimates that 10,000 lives could be saved each year if the emergency dispatching system (9-1-1) could get help one minute sooner to those calling for emergency assistance

# Options for Creating 3D Data

Lidar Data

Lidar Data and Nadir Imagery

FUGRO  
SIMMETRY™

FUGRO

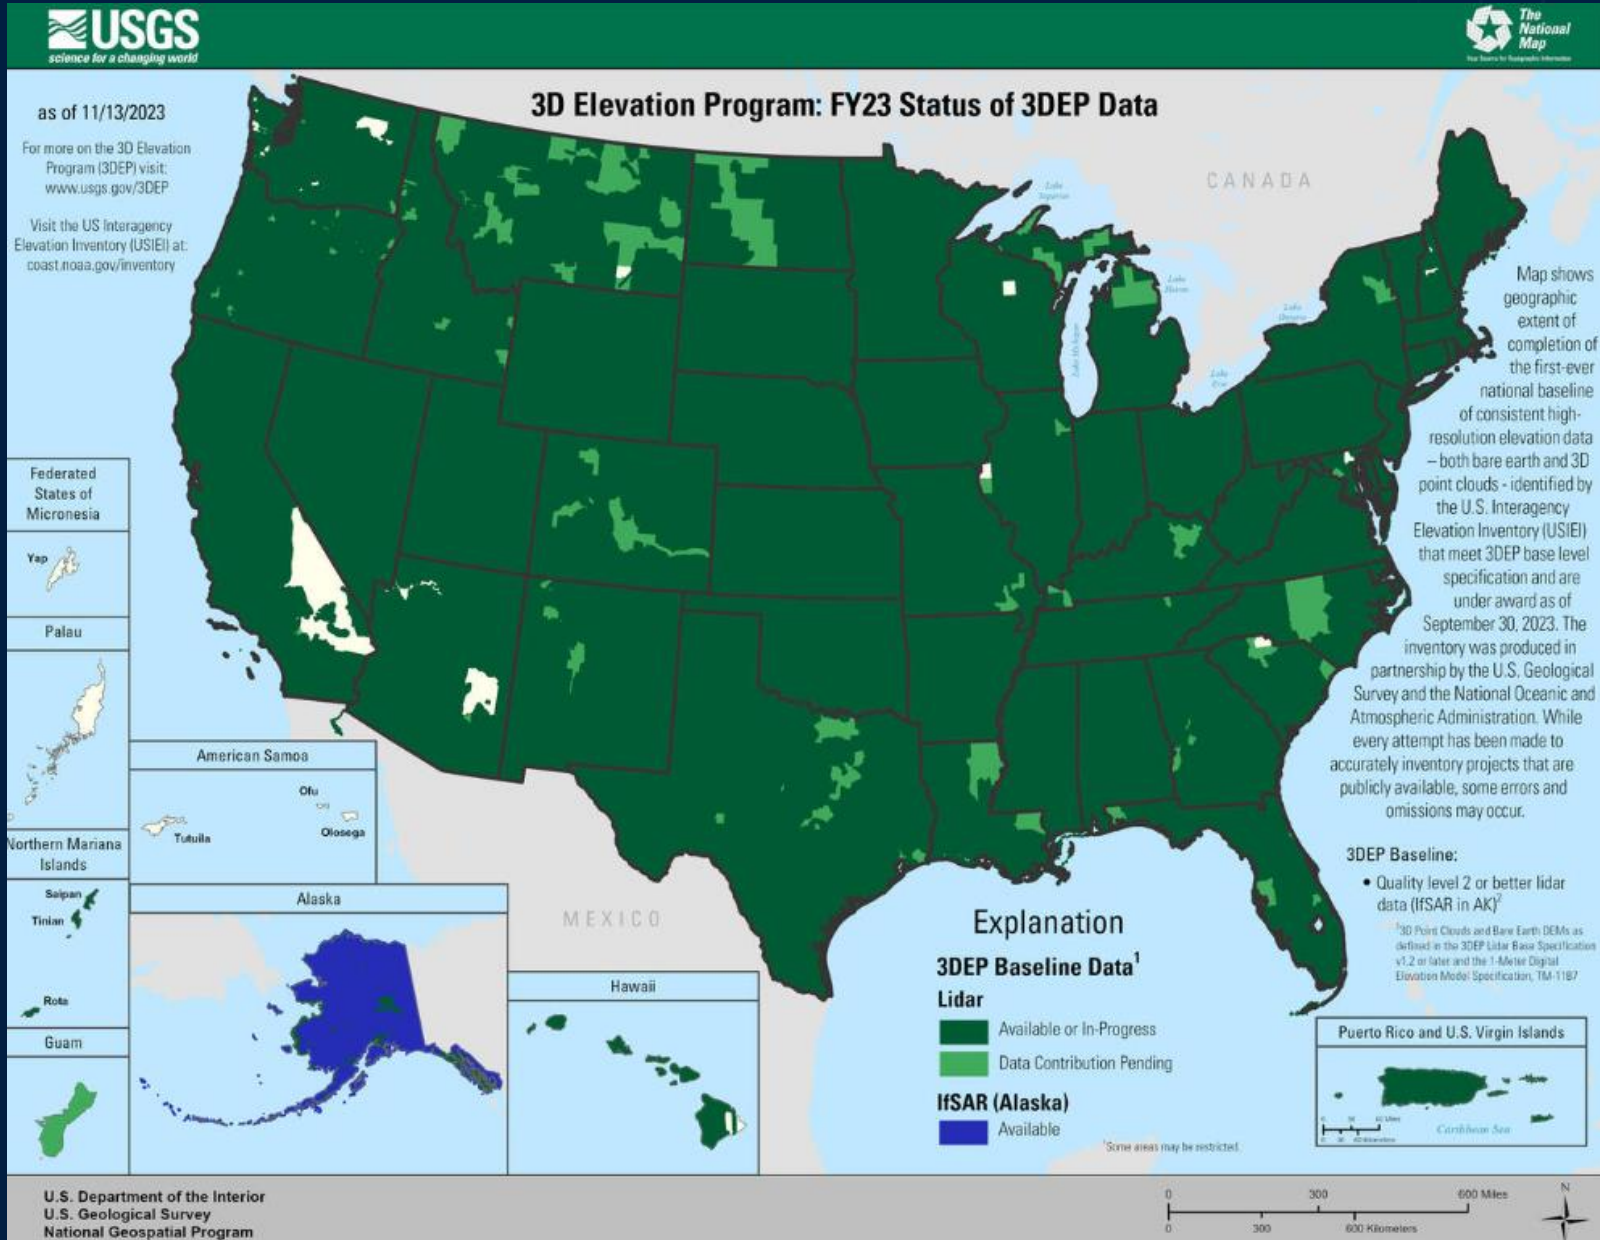

Oblique Imagery

# Lidar Derived 3D Models

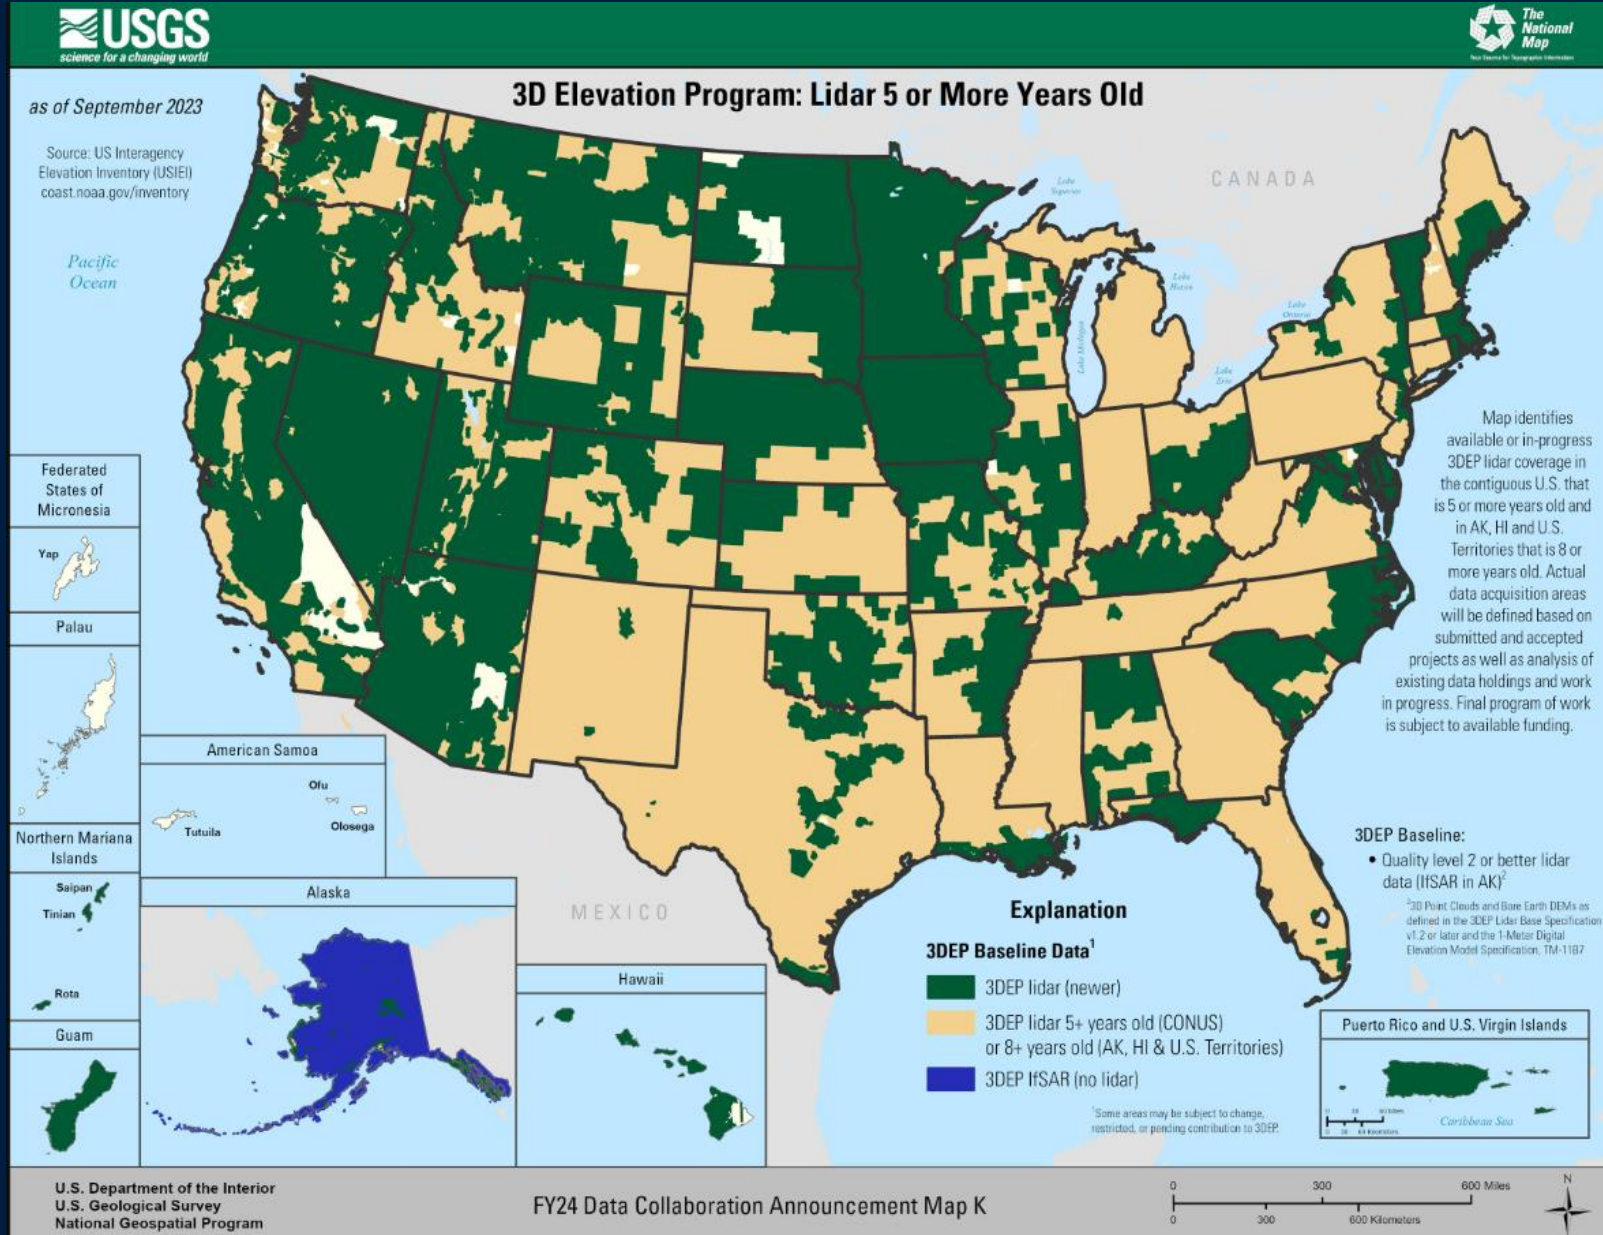

# Sense.Lidar®

- Uses cloud-based processing and AI
- Accurately classify clusters of lidar points at scale to 99% accuracy
- Identify unique features (i.e. bare earth, hydro, buildings, vegetation, culverts, utility assets, etc.) without compromising speed, quality, or cost

# Existing data considerations

Not all data is considered equal

Data quality impacts 3D model results

Data vintage doesn't always represent actual

# Lidar-Derived 3D Building Models

Nadir imagery and lidar derived 3D data
