# THE NORTH CENTRAL TEXAS Regional Transit Onboard Origin Destination Survey 2022-2023 

## November 2023

## Prepared by ETC Institute

IN ASSOCIATION WITH
North Central Texas Council of Governments,
Dallas Area Rapid Transit, Denton County Transit Authority, and Trinity Metro

## Table of Contents

EXECUTIVE SUMMARY ..... 8
Objectives ..... 8
Survey Coverage ..... 9
Survey Instrument ..... 10
Surveys Collected ..... 10
Survey Methodology ..... 12
Regional Transit Rider Profile ..... 13
Regional Transit Trip Characteristics ..... 15
Response Rates (by Mode) ..... 17
Report Organization ..... 17
CHAPTER 1: SURVEY DEVELOPMENT ..... 19
Sampling Plan ..... 19
Sources of Ridership Data ..... 19
Sampling Plan for O2O Counts and OD Survey ..... 20
Origin-Destination Sampling Plan Creation ..... 20
Survey Instrument Development Process ..... 20
Fall 22 Pilot Test ..... 22
Pilot Details ..... 22
Response Statistics ..... 23
Survey Length ..... 23
Geocoding statistics ..... 24
Survey Instrument Design Comments/Issues ..... 24
Spring 23 Pilot Test ..... 24
Pilot Details ..... 24
Survey Instrument Design Comments ..... 25
Survey Marketing ..... 25
CHAPTER 2: SURVEY ADMINISTRATION ..... 28
Data Collection Activities ..... 28
Labor Recruitment and Training ..... 28
OD Survey Administration ..... 32
In-Field Quality Assurance/Quality Control ..... 33
Data Collection Dashboard ..... 34
Data Quality Assurance and Processing. ..... 34
020 QA/QC Plan ..... 34
OD QA/QC Plan ..... 36
Pre-Processing Ratio Checks ..... 38
Transit Review Team (TRT) ..... 39
Post-Processing Additional Checks ..... 42
Process for Identifying Complete Records ..... 42
CHAPTER 3: SURVEY WEIGHTING AND EXPANSION ..... 44
Data Expansion Overview ..... 44
Types of Data Expansion ..... 45
Type 1 Expansion: Rail Routes with APC Data, 020 Counts, and OD Survey Data ..... 47
Type 2 Expansion: Bus Routes with APC Data, OD Survey Data, but No 020 Counts Data ..... 53
Type 3 Expansion: Bus Routes with 020 Counts and OD Survey Data, but without Stop-Level Ridership/APC Data ..... 53
Type 4 Expansion: Bus Routes with OD Survey Data, without 020 Counts Data or Stop-Level Ridership/APC Data ..... 54
Types of Data Expansion Breakdown ..... 57
General Rule for Expansion Factors ..... 57
Linked Trip Expansion Factors for All Records ..... 58
CHAPTER 4: REGIONAL FIXED ROUTE DATA ANALYSIS (OD) ..... 60
Regional Overall Ridership Profile ..... 60
Gender ..... 60
Age ..... 62
Ethnicity/Race ..... 64
Household Income ..... 67
Household Size ..... 71
Employment Status ..... 73
Household Employment ..... 75
Student Status ..... 78
Disability Status ..... 80
Visitor/Resident Status ..... 81
Language Spoken at Home Other Than English ..... 83
Language Spoken at Home ..... 84
English Speaking Ability ..... 92
Household Vehicles ..... 94
Household Vehicle for Trip ..... 96
Driver's License ..... 98
Frequency of Public Transit Use ..... 99
Smartphone/Cell Phone Use ..... 102
Regional Overall Trip Profile ..... 103
Trip Purpose ..... 104
Transit Trip Mode ..... 107
Origin Type of Place ..... 108
Origin Map ..... 112
Destination Type of Place ..... 118
Destination Map ..... 122
Access Mode ..... 128
Access Walk Distance. ..... 130
Boarding Time ..... 133
Wait Time ..... 137
Egress Mode ..... 139
Egress Walk Distance ..... 142
Same Trip Frequency ..... 144
Trip Planning ..... 146
Where purchased Pass ..... 149
Pass Type ..... 152
Pass Payment ..... 154
Pass Duration ..... 157
Number of Transfers ..... 159
Pass Type by Pass Duration ..... 163
CHAPTER 5: REGIONAL SURVEY SUMMARY BY SERVICE TYPE (OD) ..... 168
Regional Rider Profile Summary by Service Type ..... 168
Regional Trip Profile by Service Type ..... 181
CHAPTER 6: Regional Mobility On-Demand ..... 197
Overview ..... 197
Fall 2022 Data Collection ..... 199
Spring 2023 Data Collection ..... 200
Data Quality Assurance ..... 200
Data Expansion ..... 201
Lessons Learned ..... 201
Regional Mobility On-Demand Data Analysis ..... 201
Regional Mobility On-Demand Ridership Profile ..... 202
Regional Mobility On-Demand Trip Profile ..... 212
APPENDIX A: Survey Instrument (Paper) ..... 226
APPENDIX B: Survey Instrument (Tablet) ..... 231
APPENDIX C: Sample Plans ..... 254
APPENDIX D: Fixed Route Data Dictionary ..... 265
APPENDIX E: Types of Fixed Route Data Expansion ..... 295
APPENDIX F: Mobility On-Demand Paper Survey Instrument ..... 298
APPENDIX G: Mobility On-Line Survey Instrument ..... 307
APPENDIX H: Mobility On-Demand Data Dictionary ..... 325
Agency Book: DART Fixed Route and GoLink Survey Findings ..... 357
Agency Book: DCTA Fixed Route and GoZone Survey Findings ..... 357
Agency Book: Trinity Metro Fixed Route and ZIPZONE Survey Findings ..... 357
Agency Book: Trinity Railway Express Survey Findings ..... 357
Agency Book: Arlington Via Survey Findings ..... 357

## List of Tables

Table 1: Survey Data Elements ..... 10

# THE NORTH CENTRAL TEXAS <br> 2022-2023 <br> Regional Transit Onboard Origin-Destination Survey <br> <br> EXECUTIVE SUMMARY 

 <br> <br> EXECUTIVE SUMMARY}

In Fall 2022 and Spring 2023, North Central Texas Council of Governments (NCTCOG), Dallas Area Rapid Transit (DART), Denton County Transit Authority (DCTA) and Trinity Metro partnered together to conduct an onboard, Origin-Destination Transit Survey, aimed to examine the highly traveled regions of North Central Texas. The purpose of the study was to collect and establish the patterns and trip-making decisions of weekday transit passengers to assist the transit agencies in their planning process and for use in NCTCOG's regional travel model. ETC Institute was contracted to manage and execute the onboard, weekday, surveying of local bus, commuter bus, commuter rail, light rail, trolley/shuttle, and Mobility OnDemand, for each of the transit systems below:

- Dallas Area Rapid Transit
- Denton County Transportation Authority
- Trinity Metro
- Trinity Railway Express (TRE)
- Arlington Via

The coverage area for DART, DCTA, Trinity Metro, and TRE are shown in Figure 1.

## Objectives

The primary objectives for the survey were as follows:

- Compile statistically accurate information about transit passengers and how they use transit in the region.
- Generate reliable linked Origin-Destination (OD) data needed by the transit agencies to aid design of the transit system to match the needs of the existing and potential users and needs by NCTCOG to support travel demand modeling and transportation network simulation activities used for regional long-range transportation planning.
- Assess changes in trip characteristics and ridership profiles of transit riders by comparing the 2022-2023 survey results with data collected from previous transit surveys in north central Texas.
- Collect recent travel pattern data to be used in applications for Federal Transit Authority (FTA) Grant programs.
- Meet the Title VI Civil Right Requirements per the latest FTA guidance. This includes providing data that supports requirements to collect and report demographic data, monitor transit service, and evaluate service and fare changes.

## Survey Coverage

Figure 1: Coverage Area for DART, DCTA, and Trinity Metro

## North Central Texas Major Transit Authorities

## Survey Instrument

Representatives from NCTCOG, DART, DCTA, and Trinity Metro worked together to develop a survey instrument that met the needs of all the agencies and had consistent wording and response options for all agencies. The survey focused on collecting (1) all elements of the "one-way" trip including trip purpose, origin and destination addresses, boarding and alighting locations, access and egress modes, and transfers made; (2) information needed for the travel demand model and transit planning, including person and household demographics; and (3) Title VI information to be used for transit agency compliance.

Table 1: Survey Data Elements

| Data Elements Captured During the Survey |  |
| :--- | :--- |
| Elements of the "One-way Trip" |  |
| Other Trip Characteristics/Title VI/Demos |  |
| Respondents' Primary Residence (Home Location) | Fare Type and Duration |
| Respondents' Origin Type and Location | Frequency of Transit Usage |
| Respondents' Destination Type and Location | Age, Race/Ethnicity, Gender |
| Route Respondent Currently Riding | Household Income and No. of Household Vehicles |
| Transfer Routes Used During One-way Trip | Employment/Student Status and School Place |
| Boarding and Alighting Stops/Locations | English Proficiency |
| Mode Used by Respondents' to Access/Egress <br> Transit | Size of Household and No. of Employed Household <br> Members |

## Surveys Collected

The survey project aimed to collect $10 \%$ of the weekday ridership for all routes across all transit agencies (DART, DCTA, and Trinity Metro). This target was modified for certain rates to include 20\% of the weekday ridership for all routes whose ridership was less than 500 and $15 \%$ of the ridership at the connection stations between the three commuter rail lines. The target sample sizes across all transit agencies and bus and rail modes amounted to 18,293 completed weekday surveys. The actual number of completed weekday surveys was 32,976 . The following table documents the weekday ridership, target sample size, and actual number of surveys collected for each transit agency's bus and rail systems.

Table 2: Surveys By Agency

| Provider/Mode | Target Sample <br> Size | Surveys <br> Collected |
| ---: | ---: | ---: |
| Dallas Area Rapid Transit (DART) |  |  |
| DART Rail | 6,293 | 11,070 |
| DART Bus | 8,995 | 16,350 |
| DART Total | 14,909 | 27,420 |
| Trinity Railway Express (TRE) |  |  |
| TRE Rail | 379 | 995 |
| TRE Total | 379 | 995 |
| Trinity Metro (TRINITY METRO) |  |  |
| TRINITY METRO Rail | 146 | 450 |
| TRINITY METRO Bus | 1,667 | 2,468 |
| TRINITY METRO Total | 1,813 | 2,918 |
| Denton County Transportation Authority |  |  |
| (DCTA) |  | 253 |
| DCTA Rail | 152 | 1,090 |
| DCTA Bus | 1,040 | 1,643 |
| DCTA Total | 1,192 | 18,293 |

Table 3: Surveys by System and Mode

| Provider/Mode | Average Daily <br> Ridership <br> (ADR) | Target <br> Sample <br> Size | Percent of <br> ADR <br> Sampling <br> Plan | Surveys <br> Collected | Percent <br> ADR <br> Captured |
| :--- | ---: | ---: | ---: | ---: | ---: |

| All Systems Combined | 160,457 | 18,292 | 10-20\% | 32,976 | 21\% |

## Survey Methodology

ETC interviewers conducted the Origin-Destination survey on local bus and rail by intercept interviews of passengers. Interviewers randomly selected passengers to participate in the interview throughout the duration of the trip. If the passenger agreed, the interviewer conducted the survey using a tablet personal computer (tablet), recording responses in real-time. The tablet computers had on-screen mapping features that allowed for geocoding of addresses based on feedback from the passenger. The interviewer was available to answer any passenger questions to ensure the accuracy of the data collected. To provide the passenger with more privacy, respondents could also select responses to demographic questions directly on the tablet themselves. For express routes, surveys were conducted via paper intercepts and followed with rider debriefs to confirm completion and accuracy. This was done to maximize survey collection during the brief windows of the service.

For non-English speaking riders, ETC employed multilingual interviewers. While ETC interviewers can speak various languages such as Chinese, Vietnamese, French, and Arabic, the majority of non-English interviews were conducted in Spanish.

## Regional Transit Rider Profile

Table 4: Regional Transit Rider Profile

| 2022/23 NCTCOG Regional OD Survey Demographics (\% Weighted Value) |  |  |  |
| :---: | :---: | :---: | :---: |
| Age |  | Ethnicity/Race |  |
| Under 18 | 1.8\% | American Indian/Alaskan Native | 0.9\% |
| 18-19 | 5.6\% | Asian/Indian | 5.9\% |
| 20-24 | 20.6\% | Black/African American | 49.4\% |
| 25-34 | 26.3\% | Hispanic/Latino | 21.4\% |
| 35-44 | 20.8\% | Native Hawaiian/Pacific Islander | 0.6\% |
| 45-54 | 13.5\% | White/Caucasian | 25.7\% |
| 55-64 | 7.9\% | Other | 0.3\% |
| 65+ | 3.5\% | Two or more Races/Ethnicities | 0.3\% |
| Gender |  | Do you speak another language at home? |  |
| Male | 58.3\% | Yes | 21.7\% |
| Female | 41.5\% | No | 78.3\% |
| Other | 0.1\% | Household Income |  |
| Refused/No Answer | 0.1\% | \$0-\$19,999 | 19.6\% |
| How often do you use public transit? |  | \$20,000-\$24,999 | 10.8\% |
| every weekday | 65.4\% | \$25,000-\$32,999 | 11.5\% |
| 2-4 times/week | 22.9\% | \$33,000-\$39,999 | 12.0\% |
| once/week | 2.7\% | \$40,000-\$49,999 | 9.2\% |
| 2-3 times/month | 3.4\% | \$50,000-\$59,999 | 6.9\% |
| once/month | 1.7\% | \$60,000-\$74,999 | 5.5\% |
| less than once/month | 3.8\% | \$75,000-\$99,999 | 5.2\% |
| Household Size |  | \$100,000 or More | 2.9\% |
| One (1) | 23.7\% | Refused/No Answer | 16.4\% |
| Two (2) | 23.3\% | Available Vehicles To Household |  |
| Three (3) | 22.6\% | None (0) | 49.2\% |
| Four (4) | 15.0\% | One (1) | 31.2\% |
| Five (5) | 10.0\% | Two (2) | 16.1\% |
| Six or More (6+) | 5.5\% | Three or More (3+) | 3.5\% |

Age

- $67.7 \%$ of riders are between 25 and 44 years old.
- $24.9 \%$ of riders are older than 44 years old.

Gender

- $58.3 \%$ of riders are male.
- $41.5 \%$ of riders are female.

## Transit Usage Frequency

- Most riders (65.4\%) use public transit every weekday.
- The second largest group (22.9\%) use public transit two to four times per week.
- $11.6 \%$ of riders use public transit one or fewer times per week.

## Household Size

- $47 \%$ of riders live in a household by themselves or with one other person.
- $53 \%$ of riders live with at least two other people.

## Ethnicity/Race

- $49.4 \%$ of riders are Black or African American.
- $25.7 \%$ of riders are White or Caucasian.
- 21.4\% of riders are Hispanic or Latino.

Language

- $21.7 \%$ of riders speak a language other than English at home.
- 76.0\% of those individuals speak Spanish at home.

## Household Income

- Nearly one-fifth (19.6\%) of riders have a household income of less than \$20,000 per year.
- $32.7 \%$ of riders have a household income between $\$ 25,000$ and $\$ 50,000$ per year.
- $8.1 \%$ of riders have a household income of $\$ 75,000$ or more per year.

## Available Vehicles at Home

- 49.2\% of riders do not have an available vehicle at home.
- $31.2 \%$ of riders have one available vehicle at home.
- $44.1 \%$ of riders with at least one available vehicle in their household could have used it for their trip.

## Regional Transit Trip Characteristics

Table 5: Regional Trip Profile

| 2022/23 NCTCOG Regional OD Trip Characteristics (\% Weighted Value) |  |  |  |
| :---: | :---: | :---: | :---: |
| Trip Purpose |  | Wait Time For Transit to Arrive (In Min.) |  |
| Home-Based Work | 48.6\% | 5 minutes or less | 50.1\% |
| Home-Based Education College | 10.2\% | 6-10 minutes | 36.7\% |
| Home-Based Social/Recreation | 10.2\% | 11-20 minutes | 10.6\% |
| Home-Based Personal | 9.9\% | More Than 20 Minutes | 2.6\% |
| Home-Based Shopping | 6.1\% | Boarding Time |  |
| Home-Based Eating Out | 3.7\% | Before 6:30 am | 6.4\% |
| Home-Based Education K-12 | 1.4\% | 6:30 am to 8:00am | 8.8\% |
| Other Home-Based Trip | 1.3\% | 8:00am to 10:00 am | 11.2\% |
| Non-Home-Based Other | 5.5\% | 10:00am to 12:00pm | 10.7\% |
| Non-Home-Based Work | 3.0\% | 12:00pm to 2:00 pm | 12.6\% |
| Transit Trip Mode |  | 2:00 pm to 4:00 pm | 13.3\% |
| Bus Only | 49.0\% | 4:00 pm to 6:00 pm | 14.8\% |
| Bus/Rail | 27.3\% | 6:00 pm to 8:00 pm | 12.3\% |
| Rail Only | 23.7\% | 8:00 pm to 10:00 pm | 7.2\% |
| Number of Transfers |  | 10:00 pm and Later | 2.8\% |
| 0 | 56.5\% | Walk Distance to Destination (In Min.) |  |
| 1 | 30.1\% | 5 minutes or less | 65.2\% |
| 2 | 11.3\% | 6-10 minutes | 20.4\% |
| 3 | 2.0\% | 11-20 minutes | 10.7\% |
| 4 | 0.0\% | 21-30 minutes | 2.8\% |
| 5+ | 0.0\% | More than 30 minutes | 1.0\% |
| Access Mode |  | Where did you get your pass? |  |
| Walk | 87.8\% | GoPass Mobile App | 40.4\% |
| Was dropped off by someone | 4.5\% | On the bus/train | 27.3\% |
| Drove alone and parked | 2.8\% | Ticket Vending Machine | 11.6\% |
| Uber, Lyft, etc. | 1.5\% | School/University/Employer | 11.3\% |
| Other | 3.3\% | Other | 9.3\% |

Trip Purpose

- Nearly half (48.6\%) of surveys were conducted with riders doing home-based work trips.
- Home-based education and home-based social/recreation accounted for $20.4 \%$ of trips surveyed.
- $91.5 \%$ of trips surveyed involved home as the origin or destination.

## Transit Trip Mode

- $49 \%$ of riders surveyed rode buses only on the trip in which they were surveyed.
- $27.3 \%$ of riders rode both bus and rail on the trip in which they were surveyed.
- $23.7 \%$ of riders rode rail only on the trip in which they were surveyed.

## Transfers

- $56.5 \%$ of riders indicated that their trips did not involve a transfer.
- $30.1 \%$ of riders indicated that their trip required one transfer.
- $13.3 \%$ of riders indicated that their trip required two or more transfers.

## Access Mode

- $87.8 \%$ of riders walked to their first transit element.
- $4.5 \%$ were dropped off by someone going someplace else.

## Wait Time

- Half (50.1\%) of riders said they had to wait five minutes or less for their bus or train to arrive.

## Boarding Time

- The most popular boarding time for riders surveyed was between 4:00pm and 6:00pm.

Walk Distance to Destination

- Most riders (65.2\%) said that they had to walk five minutes or less to their destination after they deboarded their final transit vehicle.

## Pass Purchase

- $40.4 \%$ of riders purchased their pass on the GoPass Mobile App.
- $27.3 \%$ of riders purchased their pass onboard the bus or train.

## Response Rates (by Mode)

Table 6: Response Rates

| Provider/Mode | \# of Riders Asked to Participate (by Mode) | \# of Riders Who Agreed to <br> Participate (by Mode) | \# of Riders <br> Who <br> Refused | Actual Response Rate (by Mode) | Actual <br> Refusal <br> Rate (by <br> Mode) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dallas Area Rapid Transit (DART) |  |  |  |  |  |

| Green DART Light Rail | 3,822 | 3,106 | 716 | 81\% | 19\% |
| Orange DART Light Rail | 2,843 | 2,172 | 671 | 76\% | 24\% |
| Red DART Light Rail | 3,802 | 3,051 | 751 | 80\% | 20\% |
| Streetcar/Trolley | 455 | 381 | 74 | 84\% | 16\% |
| DART Rail Total | 14,381 | 11,451 | 2,856 | 80\% | 20\% |
| DART Bus | 21,976 | 15,969 | 5,626 | 73\% | 26\% |
| DART total | 36,357 | 27,420 | 8,482 | 75\% | 23\% |
| Trinity Metro (TM) |  |  |  |  |  |
| TM TexRail | 563 | 450 | 113 | 80\% | 20\% |
| TM Bus | 3,354 | 2,468 | 886 | 74\% | 26\% |
| TM Total | 3,917 | 2,918 | 999 | 74\% | 26\% |
| Denton County Transportation Authority (DCTA) |  |  |  |  |  |
| DCTA A train | 296 | 253 | 43 | 85\% | 15\% |
| DCTA Bus | 1,592 | 1,390 | 202 | 87\% | 13\% |
| DCTA Total | 1,888 | 1,643 | 245 | 87\% | 13\% |
| Trinity Railway Express (TRE) |  |  |  |  |  |
| TRE Trinity Railway | 1,292 | 995 | 297 | 77\% | 23\% |
| TRE Total | 1,292 | 995 | 297 | 77\% | 23\% |
| All Systems Combined | 43,454 | 32,976 | 10,023 | 76\% | 23\% |

## Report Organization

This first three chapters of this report present the main details of the survey covering Survey Development, Survey Administration, and Survey Weighting and Expansion.

Results of the Regional Fixed Route Survey are presented in total and by service type in Chapters 4 and 5. The Mobility On-Demand data collection and regional results are presented in Chapter 6. The appendixes contain reference items including survey instruments, data definition tables, and sampling plans.

Individual agency findings have been provided in five agency books: DART, DCTA, Trinity Metro, TRE, and Arlington Transportation.

## CHAPTER 1: SURVEY DEVELOPMENT

This transit onboard survey project consisted of two major elements. The On-to-Off survey element is intended to identify boarding and alighting patterns of transit riders as well as provide a basis for expanding the results of the main Origin-Destination (OD) survey. The OD Survey element consisted of detailed surveys of riders conducted on-board rail and bus routes. This chapter will discuss development of the sampling plan, survey instrument and the general survey implementation of both elements.

## Sampling Plan

North Central Texas Council of Governments (NCTCOG), Dallas Area Rapid Transit (DART), Denton County Transportation Authority (DCTA), Trinity Metro and ETC established sampling goals for all bus route, light rail, commuter rail, and trolley/streetcar/shuttle. The distribution of completed surveys mirrored the population distribution of riders on the region's major transit systems. Table 2 shows the time periods for the weekday collection of this survey.

Table 7: Project Time Periods

| Time Range | Time Period |
| :--- | ---: |
| Before 6:30 AM | Pre-Early AM |
| 6:30 AM - 8:59 AM | AM Peak |
| 9:00 AM - 11:59 AM | AM |
| 12:00 PM - 2:59 PM | Midday |
| 3:00 PM - 6:59 PM | Early Evening |
| After 7PM | Late Evening |

## Sources of Ridership Data

DART, DCTA, and Trinity Metro provided average weekday ridership numbers for each bus route, trolley, shuttle, and streetcar to be surveyed by route, direction, and time of day. For each rail line, the transit agencies provided average weekday ridership by route, direction, time of day, and boarding station. DCTA and Trinity Metro's fall 2021 ridership numbers (September-October 2021) were used to draw a final sampling plan and data collection plan for the DCTA and Trinity Metro for the Fall 2022 Survey. DART's September 2022 ridership numbers were used to make route, direction, and time of day goals for the Spring 2023 Survey. For TRE, the distribution by direction, time of day, and boarding stop was taken from April 2022, but grown to September 2022 ridership totals for use in the Spring 2023 data collection. ETC then summarized the provided ridership by route, time-of-day, and direction to create cell level percentages (Route/Direction/Time-of-day) and normalize the daily ridership totals.

## Sampling Plan for 020 Counts and OD Survey

On-to-Off (O2O) counts are collected to capture passenger boarding and alighting pairs; each boarding and alighting pair contains the stop an individual passenger boarded onto and then the stop they alighted off the transit line). O2O counts are necessary in expanding the rail and occasionally bus data by segmenting station on and off points. The sampling plan for the O2O counts for the NCT Regional OnBoard Survey was designed to obtain completed pairs from a minimum of $20 \%$ of the daily ridership depending on high ridership bus routes and all rail lines for all transit agencies (DART, DCTA, Trinity Metro).

## Origin-Destination Sampling Plan Creation

ETC established route level, direction, time of day, and station level sample sizes using sampling strata, by combining the average ridership numbers for each agency. The strata were created for local bus, commuter bus, commuter rail, light rail, trolley/shuttle, and Mobility On-Demand. Each strata (i.e., Rail, Local Bus) contains average weekday daily ridership categories from high to low ridership.

The overall Origin-Destination (OD) goal was to collect $10 \%$ of the weekday ridership for all routes, $20 \%$ of the weekday ridership for all routes whose ridership was less than 500 , and $15 \%$ of the ridership at the connection points between the three commuter rail lines. NCTCOG applied these sampling rates ( $10 \%$, $15 \%$, and $20 \%$ ) to the total average weekday ridership for all systems to come up with the total number of completed surveys $(18,293)$. ETC then developed an OD sample plan from the route level strata ensuring the completion of at least 18,293 OD surveys across all bus and rail lines of the three transit agencies. Route level goals were provided by NCTCOG which used the forementioned strata. Cell level goals were created by route, direction, and time-of-day by utilizing ridership data from SeptemberOctober 2022 for DCTA and Trinity Metro, September 2022 for DART, and April and September 2022 for TRE. The cell level goals were created off a combination of cell level (route/direction/time-of-day) boarding percentages. Table 3 shows the sample sizes by system/mode, including individual rail lines.

## Survey Instrument Development Process

The survey instrument development process began by having representatives from NCTCOG, DART, DCTA, and Trinity Metro review the data requirements for the transit onboard survey. Since it was a regional survey, the agencies strived to have one survey instrument to be used for data collection on all agencies, while making sure each agency's needs were addressed in any additional questions or the options available to the various questions. To be comparable to the last regional survey in 2014, the team used the survey instrument from the 2014 North Central Texas Regional Transit Travel Survey as a starting point. The survey focused on collecting (1) all elements of the "one-way" trip including trip purpose, origin, and destination addresses, boarding and alighting locations, access and egress modes, and transfers made; (2) information needed for the travel demand model and transit planning, including
person and household demographics; and (3) Title VI information to be used for transit agency compliance.

Among the data requested from the questionnaire are the following:

- Whether the respondent is a resident of the DFW region
- Home address
- One-Way Trip:
- Origin and Destination addresses
- Boarding and Alighting Locations
- Access and Egress mode
- Trip purpose
- Number of transfers
- Transfer routes
- Time of Day trip was completed
- Direction of travel
- Wait Time
- Trip Planning
- Frequency of transit use
- Pass and Payment
- Pass Type
- Pass Duration
- Method of payment
- Household Demographics
- Number of household occupants
- Number of vehicles available to the household
- Number of members of the household (15+) who are employed
- Household Income
- Person Demographics
- Age
- Disability status
- Race/Ethnicity
- Gender
- English language ability
- Employment status
- Student status
- Driver's license status

The survey instrument was included in the Pilot Test described in the next section to determine if users had any difficulties understanding the questions or options. The final version of the paper questionnaire for each agency is included in Appendix A.

## Fall 22 Pilot Test

## Pilot Details

ETC Institute conducted a pilot test of the survey during the week of August $22^{\text {nd }}, 2022$. The pilot test involved the administration of Origin-Destination (OD) surveys and On-to-Off (O2O surveys) as a test to the survey instrument. It also replicated all tasks that will be conducted for the administration of the full OD survey to test the process from sampling and data collection to downloading and cleaning the data. The primary goals for the pilot test were as follows:
(1) assess the full sampling and survey methodology using tablet interview using ETC's smart programming and built in Quality Assurance Quality Control (QAQC)-logic
(2) evaluate the process for selecting respondents and data collection procedures
(3) evaluate methods used to ensure that customers selected for the survey can participate regardless of disability or English language proficiency
(4) evaluate response rates and factors that contribute to non-response
(5) assess real-time geocoding procedures as well as transfer feasibility, distance ratio checks, and all other QAQC, both in field and post-survey
(6) assess the questions included in the survey instrument and make recommendations for streamlining/modifying questions to improve the clarity and ability to administer the survey in a timely manner
(7) assess survey length and make recommendations on shortening or lengthening the survey by service type, etc.
(8) check that all the responses are making it successfully into the database file of the instrument and no data is lost

The routes included in the pilot plan were chosen based on the need to test the survey instrument, tablet programming and methods on various transit riders and conditions. Routes sampled included a mix of low and high-volume routes; representation of all service types (local, circular, rail, and on-demand); and several Limited English Proficiency (LEP) routes. The final route list included in the pilot test were Trinity Metro bus routes 1, 4, 24, 31, and 91; commuter rail line DCTA A-Train and Mercantile Zip Zone (OD Intercept). In addition to OD interviews, the pilot test also involved the completion of On-to-Off (O2O) surveys on one trip each of one commuter rail line (A-Train) and one local bus route (Route 1). The list of routes and the pilot survey routes are provided in Table 8.

Table 8: Fall 22 Pilot Survey Routes

| Route Name | Agency | Route Type | Pilot Surveys |
| :--- | :--- | :--- | :--- |
| Route 1 - Hemphill | Trinity Metro | Bus - Radial | OD and O2O |

| Route Name | Agency | Route Type | Pilot Surveys |
| :--- | :--- | :--- | :--- |
| Route 4-East Rosedale | Trinity Metro | Bus - Radial | OD |
| Route 24-Berry | Trinity Metro | Bus - Crosstown | OD |
| Route 31 - TRE Link | Trinity Metro | Bus - Circulator | OD |
| A-train | DCTA | Rail - Commuter Rail | OD and O2O |
| ZipZone - Mercantile | Trinity Metro | Mobility On-Demand | OD |

## Response Statistics

The pilot test involved the administration of OD surveys on Bus, Rail and Zip Zone intercept targeting. The goal was to obtain at least 200 surveys that are useable for modeling purposes as described in the contract scope; the definition of a usable survey is provided in Appendix A. The 221 usable surveys were collected across the different services with 69 complete on Light Rail Transit (LRT), 148 on bus lines, and four on Zip Zone intercepts.

A total of 338 riders were asked to participate. Of those 338 riders, 246 ( $72.7 \%$ ) riders indicated they had time to complete the survey with the interviewer; 88 riders (26.03\%) refused; $4(<1 \%)$ riders indicated they would like to take the survey but did not have time to complete it.

Nearly all surveys (94.5\%) were completed on the bus/rail with the interviewer. $5.5 \%$ of completed surveys were completed off the bus/rail with the interviewer; these were started on the bus/rail, but completed off of the bus/rail due to a lack of time on the bus/rail. Out of the 246 riders who initially completed the survey, 137 gave a follow-up phone number/email. The completed surveys were run through the QA/QC process and 221 were deemed usable. Of the 246 riders who initially completed a survey, $98.7 \%$ were conducted in English and 1.3\% were conducted in Spanish.

## Survey Length

On average, the survey took 6.90 minutes to complete, with the longest survey length being over 9 minutes and the shortest survey being just under 5 minutes to complete via Tablet PC. Survey lengths were based on completed surveys.

The average time to complete the first half of the survey was 4.20 minutes; the first half of the survey included trip elements from Origin to Destination. The average time to complete the second half of the survey was 2.70 minutes; the second half of the survey included sections covering other trip information, fare and payment, and Title VI and demographics.

## Geocoding statistics

All addresses (Origin, Destination, Boarding, Alighting) were geocoded in real-time on the Tablet PC's. Ninety percent (90\%) of the pilot records were deemed "Useable" after a visual review and postprocessing of the dataset. One reason this can happen is that despite what is presenting in the map and geocoding, the rider is unwillingly to provide complete or exact details of their trip such as origin and Destination Type of Places.

## Survey Instrument Design Comments/Issues

The pilot test confirmed that the survey instrument could be successfully administered to riders.
The main change resulting was to update the programming of removing MicroTransit (GoLink, Via, ZipZone, and GoZone) from the access and egress mode questions and to be included as individual routes that users could select when describing the path of their one-way trip.

During the evaluation of intercepting ZipZone riders, Interviewers were able to target ZipZone users for participation in the intercept survey to determine how accurately they could provide responses. No issues were encountered, and users were able to properly provide all elements of their one-way trip. During this targeting, it was noted that the volume of ZipZone users was very low, therefore, intercepting these users in the field would not yield adequate number of responses for this user group.

## Spring 23 Pilot Test

## Pilot Details

ETC Institute conducted a pilot test of the spring 23 survey during the week of February $6{ }^{\text {th }}, 2023$. The pilot test involved the administration of Origin-Destination (OD) surveys and On-to-Off (O2O surveys) as a test to the survey instrument. The tasks and goals corresponded to what occurred in the Fall 22 pilot test.

The routes included in the pilot plan were chosen based on the need to test the survey instrument, tablet programming and methods on various transit riders and conditions. Routes sampled included a mix of low and high-volume routes; representation of all service types (local, express, light rail, and commuter rail); and Limited English Proficiency (LEP) routes. The final route list included in the pilot test were DART bus routes 9,229 , and 305 , and the Blue LRT line, and TRE commuter rail line. The list of routes and the pilot survey routes are provided in Table 9.

Table 9: Spring 23 Pilot Survey Routes

| Route Name | Agency | Route Type | Pilot Surveys |
| :--- | :--- | :--- | :--- |
| Route 9 - Jefferson Gaston | DART | Bus - Radial | OD |
| Route 229 - MacArthur Beltline | DART | Bus - Radial | OD |
| Route 305 - Addison Express | DART | Bus - Express | OD |
| RED LINE | DART | Light Rail | OD |
| TRE | TRE | Commuter Rail | OD |

## Survey Instrument Design Comments

The pilot test confirmed that the survey instrument could be successfully administered to riders.
The main recommendations/notes were the following:

1. The survey is long with the DART Market Segmentation questions, so recommend that it is only offered to every $5^{\text {th }}$ person.
2. With the right encouragement, surveyors can get a better response rate on household income question than was obtain in the fall survey.

## Survey Marketing

Marketing of the survey was done through different methods. Physical posters written in Spanish and English were placed on some vehicles, rail stations, and kiosks. Riders were also informed of the survey through rider alerts and rack cards on transit vehicles. Press releases and radio interviews were included. Social media posts were made on Facebook and Twitter, transit agencies informed their ridership through apps or emails, and a website was constructed to provide general information about the survey. Examples of the posters used are provided in Figure 2.

Figure 2: Marketing Material

## CHAPTER 2: SURVEY ADMINISTRATION

## Data Collection Activities

## Labor Recruitment and Training

Assembling a team of high-quality survey staff was one of the most important steps in both the O2O and OD administration process. ETC collaborated with the staffing firms ANIK and Stat Team Staffing to provide interviewers for the both the O2O and OD surveys.

ETC conducted two major training sessions for data collection. The first session was for the O 2 O counts, and the second session was for the OD survey. When additional surveyors were needed for either survey type, there were additional training sessions conducted throughout the data collection process with smaller groups. Training sessions focused on the study's purpose and objectives, the survey instruments, scripts on how to respond to passengers' questions, how to use data collection tools, instructions on how to conduct themselves when working with the public, and safety training. ETC provided in-depth project-specific training to ensure successful data collection. The training reviewed project specifics and field procedures and provided training on how to actively engage customers (passengers). Key highlights in the training included courtesy, professionalism, and person-to-person interactions.

The survey staff were instructed to understand that while they were not NCTCOG, or any of the other transit systems employees, they were representing all agencies while on transit vehicles or property and they needed to act in a manner that reflected positively. Maximizing participation and legitimizing the survey among passengers depended on the public response to the survey staff. For that purpose, ETC imposed strict dress code standards that required survey staff to wear clean appropriate clothing to present a casual, yet neat, appearance that ensured professionalism and comfort. Survey staff were provided with surveyor badges and vests, identifying interviewers from other transit agencies staff and passengers; the badges used are pictured in Figure 3.

${ }_{\text {TRINITY }}$ METRO
DCTA

SURVEYTEAM

## 2023 Regional Transit Survey

## Training 020 Surveyors

The ETC field manager created the necessary training materials and conducted the On-to-Off (O2O) Survey training. The primary tool that was used for the training session was a PowerPoint presentation. The training discussed the following topics:

- Equipment use and set-up
- Methodologies for collecting rail boarding and alighting pairs
- How to approach passengers
- How to manage refusals
- How to react in various situations that may be encountered
- Safety training

Surveyors were evaluated on their proficiency and were provided with additional coaching if needed. If the surveyor was deemed unable to perform the O2O count, they were replaced.

## Training OD Interviewers

The ETC field manager created the necessary training materials and conducted the Origin-Destination (OD) Survey training that is consistent of classroom training and field training. The classroom training session included a PowerPoint presentation to explain the purpose and objectives of the survey, questionnaire content, interviewer procedures and requirements, survey logistics, how to maximize response rates (including hard-to-survey passengers), and the data collection process in a step-by-step format. Other goals of the training included building interview staff confidence,
helping interview staff feel that they are an important part of the survey's success, and helping them understand the importance of the survey and its benefits to the community.

ETC ensures that the training addressed the following details:

- Tips on intercepting/interacting with passengers with disabilities
- Tips on intercepting/interacting with limited English proficiency passengers
- Cultural sensitivity
- Importance of understanding the intent of the questions
- Importance of random selection and properly recording all refusals
- Importance of data confidentiality
- Overview of the participating transit systems
- Overview of the topics covered in tablet questionnaire
- How to manage passenger comments and complaints
- Instructions on conveying the purpose of the survey to passengers
- Safety training

Toward the end of training, interviewers conducted mock interviews using the tablets. This exercise allowed ETC staff to gauge each interviewer's comprehension of the survey instrument and provide feedback as needed. Following classroom training, interviewers conducted live interviews with passengers under the supervision of ETC staff. ETC supervisors oversaw interviewers and provided feedback on performance throughout the remainder of the training day.

Interviewers who were conducting the survey properly began field training. Interviewers who needed more help, but showed promise, were asked to spend a second day in the field under direct supervision. During the field training period, the interviewer's productivity and data quality were assessed by ETC staff.

## 020 Survey Administration

## 020 Surveyors Roles

The O2O surveyors were responsible for the collection of the O2O counts using the tablet program. Surveyors asked the riders at which stop they entered (if not observed) and at what stop they will exit the train.

## O20 Program Procedure - Bus

ETC collects Boarding-to-Alighting transit stop pairs using state-of-the art, high-yield tools and methodologies developed in-house. These On-to-Off counts are used to guide the data collection plan for the onboard Origin Destination (OD) survey and supplement the Automated Passenger Count (APC) data in the OD survey expansion process.

The O2O counts were collected using ETC's proprietary software running on GPS-capable tablets equipped with barcode scanners. Tablets onboard the same bus are paired up before a data collection session begins. Each rider's route, direction, boarding and alighting information (time, latitude and longitude) are captured with a high degree of accuracy via the following process:

- Before any collection takes place, surveyor staff are trained on every aspect of the onboard process.

Supervisory staff administer a variety of quality control checks during tablet set-up, including review of Route \#, Team \#, Block \#, Run \#, Bus \#, and Partner Tablet ID\#.

- Surveyor staff visually inspect GTFS loaded in the program and report missing stops.
- These Onboard Team Members are positioned at the front door and back doors, just behind the yellow boarding line.
- Once a rider boards the bus and pays their fare, they are asked to participate.
- If the transit rider agrees, the onboard team member scans a card.
- The team member. immediately gives the scanned card to the transit rider and asks them to hold the card until they exit through the backdoor.
- Bus riders are asked to keep the barcoded card for the duration of their trip on that transit vehicle.
- Bus riders are asked to hand their cards back as they exit the vehicle. The cards are scanned as the riders exit the bus by an onboard team member.

The 020 software sends the scanned data to the 020 server where a server-side processing system evaluates the data and pairs up the boarding and the alighting locations of each rider based on the unique barcode, time stamps, and other variables.

The O2O software is centered on a live map of the current transit route and associated stops. Our onboard data collection staff is able to follow the map of the route and accurately select the riders' boarding and alighting locations. Route termini are clearly marked on the map and the surveyor is alerted when he/she approaches a route terminus, where the session is closed and a new session begins when the bus/train begins a new run.

## 020 Program Procedure - Rail

The 020 counts were collected using tablets equipped with a survey program consisting of two questions: "Where did you get on this rail line?" and "Where will you get off this rail line?". The riders' route, direction, boarding and alighting information, and time were captured with a high degree of accuracy via the following process:

- Transit riders were asked to participate as they entered the rail vehicle.
- Each rider entering the rail line was asked where they got on that line (if not observed from the surveyor) and where they will get off the same rail line by a surveyor.
- The surveyor would select the boarding and alighting stops from a programmed drop-down menu, which was associated with rail line they were collecting O2Os.
The O2O software sent the entered data to the O2O server where a server-side processing system stored the data for review. Before any collection took place, surveyor staff were trained on every aspect of the onboard process.

## OD Survey Administration

## OD Survey Interviewer Roles

For the OD Survey, interviewers boarded their assigned bus/train and selected riders at random to participate in the survey. While conducting the interview, interviewers asked the respondent each question from the survey tablet and recorded each response provided to them by the passenger.

## Selection of Participants

For the OD tablet surveys, a random number generator was used to determine which passengers were asked to participate in the survey after boarding the surveying bus as shown in Figure 6.

If four people boarded a bus, the surveyor would press 4 on the tablet, and the tablet randomly generated a number from 1 to 4 (see example below). If the answer was 2 , the second person who boarded the bus was asked to participate in the survey. If the answer was 1 , the first person was asked to participate in the survey, and so forth.

The selection was limited to the first six people who boarded a bus or train at any given stop to ensure the interviewer could keep track of the passengers as they boarded. For example, if 20 people boarded a bus or train, the surveyor would press 6 and the tablet program would randomly pick one of the first six people for the survey.

Figure 4: OD Survey Random Number

## START_03_RANDOM <br> RANDOM_NUMBER <br> Please choose a number between 1 and 6: <br>  <br> THIS ROUTE: METRORAIL RED LINE [SOUTHBOUND]

If the interview is refused by the randomly selected rider, then the rider who boarded before the rider selected would be approached. For some express/commuter routes, hard copy questionnaires were administered to all boarding passengers to maximize the number of returned complete surveys.

Respondents who did not have time to complete the survey during their trip or spoke a language other than the interviewers were given the option of providing their contact information to conduct the survey at another time. Those who provided their phone numbers for call back ability were then contacted by ETC's call center to complete the survey. Only 12 surveys were completed by phone. Those interviewers that did speak the foreign language of the rider translated the English tablet version and indicated which language the interview was conducted in.

ETC tried to maintain bilingual (English/Spanish) interviewer staff throughout the entire project. At least $50 \%$ of the interview staff were bilingual. In addition to the English/Spanish interview staff, there were interviewers that spoke other languages such as French, Korean, Vietnamese, Chinese, Arabic, and other languages. The majority of interviews were conducted in English ( $\mathbf{X} \%$ ) with $\mathbf{X} \%$ of the surveys being conducted in Spanish. Other languages the survey was conducted in, including Hmong and Mandarin Chinese, made up less than $1 \%$ combined.

## OD Survey Procedure

All routes that were classified as local bus routes, trolley, shuttle, streetcar, light rail, or commuter rail were surveyed using tablets. Interviewers selected people for the survey in accordance with the sampling procedures described earlier in this subsection. Once an interviewer had selected a person for the survey, the interviewer did the following tasks:

- Approached the person who was selected and asked him or her to participate in the survey.
- If the person refused, the interviewer ended the survey.
- If the person agreed to participate, the interviewer asked the respondent if he or she had at least 5 minutes to complete the survey.
- If the person did not have at least 5 minutes on the bus, the interviewer asked the person to provide his/her name and contact information to send a link to a self-administered online version. A link was emailed or texted after the interviewer collected the passenger's information. If the passenger did not complete the survey, a phone interviewer from ETC's call center contacted the respondent and asked him/her to provide the information by phone. This methodology ensured that people who completed short trips on public transit were well represented. The majority of passengers were able to complete the surveys onboard.
- If the person had at least 5 minutes on the bus or rail, the interviewer began administering the survey to the respondent as a face-to-face interview using a tablet computer to record the answers.

## In-Field Quality Assurance/Quality Control

Every day, ETC's field supervisors reviewed each interviewer's data for the following issues to assess whether the employee was conducting the survey properly:

- Distribution of surveys by demographics
- Distribution of surveys by trip characteristics
- Length of each survey in minutes
- Percentage of refusals
- Percentage of short trips

ETC's field supervisors also conducted checks on the locations where the interviews took place by viewing the surveys in real time using mapping visualization tool. The survey is programmed to project the location of where five of the
survey's questions are asked which populates an " S " in the survey when viewing the mapping visualization tool. These checks ensured data integrity and identified if an interviewer was not onboard their vehicle conducting interviews.

## Data Collection Dashboard

ETC created a dashboard for NCTCOG, DART, DCTA and Trinity Metro to view both collection productivity and demographics collected by route. ETC Supervisors monitored the data collection with a similar dashboard to monitor collection goals and conduct quality control on interviewers' data.

## Data Quality Assurance and Processing

Many of the processes described in previous sections of this report were elements of the overall quality assurance/quality control (QA/QC) process that was implemented throughout survey administration. The establishment of sampling goals and procedures for managing the goals ensured that a representative sample was obtained from each bus/rail route. Training of interviewers and the high levels of oversight provided by the field manager and the field supervisors ensured that the survey was administered properly. Also, the use of the latest geocoding tools such as ETC's tablet survey with an embedded Google map search, ETC Elvis program, and Caliper ${ }^{\circledR}$ Maptitude Geographic Information System (GIS) software all contributed to the high quality of geocoding accuracy that was achieved.

The following subsections describe the QA/QC processes that were implemented before and after the data were collected.

## O20 QA/QC Plan

## Pre-Processing QA/QC

An analysis of the rail station stop list within the study area is conducted by ETC's GIS analyst before the survey. Effective stop geocoding depends on the initial quality of the stop data. Some of the specific checks that are conducted during the pre-processing phase include:

- Sort and delete low confidence records that are created. Confidence levels are created based on the O2O software's QA/QC algorithm, described in the next section.
- Check completeness of all fields for each record.
- Verify the time of day when a pair is reasonable given the published operating schedule for the route.

The record-matching algorithm uses the barcode value and time stamp of the scan to match the ON and OFF records. The level of confidence of the match, expressed as a number - e.g. 100 means perfect match - is determined based on auxiliary attributes of the scans falling within certain tolerances or matching expected values. These auxiliary attributes include:

- Route and Direction of the candidate scans should match; if one or both do not match, the reliability of the match is affected and marked.
- Enter and Exit- the ON scan is expected to have the Enter tag while the OFF scan should have the Exit tag; if either scan does not, a capture error is recorded and match reliability is affected.
- Paired device ID - the OFF scan is expected to have been captured on a device that is paired up with the ON
scan device.
- Session Number - each active device (e.g., a tablet) generates a globally unique ID (session number) that is then associated with its every scan operation. All devices that are co-located on the same transit vehicle are paired with each other via Bluetooth, allowing every device's unique ID, its session number, and all paired devices' IDs to be saved as part of every scan record. Given that the on2off barcode cards are reused, this series of IDs helps assure accurate matching of the on and off scans.
- Time gap between two consecutive candidate scans must be between a minimum and a maximum value, e.g. 1 min to 3 hours; the maximum value is set for the specific transit system and type of route under study.
- Travel time and vehicle speed must make sense.
- If travel time is greater than $X$ (e.g. 30 min ), vehicle speed must be greater than $Y$ (e.g. 5 mph ). The values of $X$ and $Y$ depend on the type of route and transit system; for example, a computer route would be different than local routes and shuttles..
- Distance between location of two matching scans must be greater than L (e.g. 0.1 mile).

## Post-Processing QA/QC

After boarding/alighting stops were successfully geocoded, the next step in this process involved the application of a QA/QC check for direction.

## Directional Check

Following the boarding and alighting stop locations being geocoded, the direction of travel for each record is confirmed. Stop locations and IDs are then updated based on established direction. Table 10 shows actions that are taken if the direction is incorrect.

Table 10: Directional Checks

| Issue | Description of Issue | Suggested Action |
| :---: | :---: | :---: |
| Directionality of Record | Boarding and alighting locations indicate that <br> the trip is going in the opposite direction of <br> what was selected by the surveyor. | Change Direction of Route Selected and if <br> necessary update boarding and alighting <br> locations based on appropriate direction. |

## Speed / Distance / Time Check

After directions are finalized, the next step is to run each record through the Speed / Distance / Time checks. If any of the conditions in Table 11 are met, the record is flagged for further review.

Table 11: Speed/Distance/Time Check

| On-to-Off Check Name | Check |  | Condition 1 |  | Flag? |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Speed Check | Checks Speed between boarding and <br> alighting pair | $>1 \mathrm{mph}$ | Yes |  |  |
|  |  | $>70 \mathrm{mph}$ | Yes |  |  |
| Distance Check | Checks Distance between boarding <br> and alighting pair | $<0.12$ miles | Yes |  |  |
|  | Exceeds route terminus to <br> terminus distance | Yes |  |  |  |
| Time Check | Checks time between boarding and <br> alighting pair | $<1$ minute | Yes |  |  |
|  |  | Exceeds route terminus to <br> terminus average time | Yes |  |  |

## OD QA/QC Plan

## Pre-Processing Distance Checks

A series of distance and ratio checks are preprogrammed into the FS online visual review tool in order to allow for ETC Institute's Transit Review Team (TRT) to take a more systematic approach in reviewing complete records. The TRT process for editing surveys is described in a later section. Note: The distance and ratio checks described are meant to alert the reviewer that closer evaluation is needed. It does not necessarily indicate that the record is inaccurate or unusable. The distances used for the checks are created using the great-circle distance formula which is based on a straight line from point $A$ to point $B$ that takes into account the curvature of the earth.

## Access/Egress Mode Distance Check

Table 12 shows the distance checks for access (Origin to Boarding of the $1^{\text {st }}$ Transit Vehicle) and egress modes (Alighting from the last Transit Vehicle to Destination).

Table 12: Access/Egress Mode Distance Checks

| Distance Check Name | Check | Condition 1 | Condition 2 | Flag? |
| :---: | :---: | :---: | :---: | :---: |
| Origin to Boarding | Origin to Boarding distance is greater than 1.75 miles | Access Mode - ANY USE OF A VEHICLE (ie, dropped off, rode with others, drove, taxi...) |  | No |
|  |  | Access Mode - <br> Walk/Wheelchair/Skateboard | There is at least one transfer from origin to boarding | No |
|  |  | Access Mode - <br> Walk/Wheelchair/Skateboard | There are no transfers from origin to boarding | Yes |
|  | Origin to Boarding distance is less than .2 miles | Access Mode - ANY USE OF A VEHICLE (ie, dropped off, rode with others, drove, taxi...) |  | Yes |
|  |  | Access Mode - Every mode | There is at least one transfer from origin to boarding | Yes |
|  |  | Access Mode - <br> Walk/Wheelchair/Skateboard | There are no transfers from origin to boarding | No |
| Alighting to Destination | Alighting to Destination distance is greater than 1.75 miles | Egress Mode - ANY USE OF A VEHICLE (ie, will get picked up, ride with others, drive, taxi...) |  | No |
|  |  | Egress Mode - <br> Walk/Wheelchair/Skateboard | There is at least one transfer from alighting to destination | No |
|  |  | Egress Mode - <br> Walk/Wheelchair/Skateboard | There are no transfers from alighting to destination | Yes |
|  | Alighting to Destination distance is less than .2 miles | Egress Mode - ANY USE OF A VEHICLE (ie, will get picked up, ride with others, drive, taxi...) |  | Yes |
|  |  | Egress Mode - Every mode | There is at least one transfer from alighting to destination | Yes |
|  |  | Egress Mode - <br> Walk/Wheelchair/Skateboard | There are no transfers from alighting to destination | No |

*1.75 mile is used because it is a straight-line distance so it ends up being closer to 2 miles with actual street travel.
Origin to Destination Distance Check

Table 13 shows the distance checks based on the origin and Destination Type of Places.
Table 13: Origin to Destination Distance Checks

| Distance Check Name |  |  |
| :---: | :---: | :---: |
| Origin to Destination | Origin equals the Destination | Flag Record |
|  | Origin to Destination is greater than <br> 50 miles | Yes |
|  | Origin to Destination is less than 25 |  |
|  |  |  |$\quad$ Yes | Yes |
| :--- |

## Boarding and Alighting Distance Check

Table 14 shows the distance checks based on the boarding and alighting locations.
Table 14: Boarding and Alighting Distance Checks

| Distance Check Name | Check |  |
| :---: | :---: | :---: |
| Boarding to Alighting Record |  |  |
|  | Boarding equals the Alighting | Yes |
|  | Boarding to Alighting is less than .25 <br> miles | Yes |

## Pre-Processing Ratio Checks

After all transfer checks are completed, the next step in this process involves the application of a series of QA/QC Ratio Checks.

Three ratio checks are conducted for each record. First, the distance between boarding and alighting is divided by the distance between origin and destination. If the rider has a high ratio, then the rider is on the bus for an extensive time compared to the origin to destination distance. If the check created an extremely low ratio, the use of transit seemed unnecessary.

Second, the distance between origin and boarding is divided by the distance between origin and destination. If the rider has a high ratio, the origin to boarding distance is excessive compared to the origin to destination.

Third, the distance between alighting and destination is divided by the distance between origin and destination. If the rider has a high ratio, the alighting to destination distance is excessive compared to the origin to destination. Table 15 describes in more detail the ratio checks used, and the conditions in which a record would be flagged.

| Ratio Checks | Check | Result of Formula | Condition 1 | Condition 2 | Flag? |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Boarding to Alighting distance divided by Origin to Destination distance | Boarding to Alighting Distance/Origin to Destination Distance | the result of this formula is 1.5 or greater |  |  | Yes |
|  | Boarding to Alighting Distance/Origin to Destination Distance | the result of this formula is less than . 3 | Access and Egress modes are both Walk/Wheelchair/Skateboard | There are NO transfers involved in the trip | Yes |
|  | Boarding to Alighting Distance/Origin to Destination Distance | the result of this formula is less than . 3 | Access or Egress mode - ANY USE OF A VEHICLE |  | No |
|  | Boarding to Alighting Distance/Origin to Destination Distance | the result of this formula is less than . 3 | There is at least one transfer involved in the trip |  | No |
| Origin to Boarding distance divided by Origin to Destination distance | Origin to Boarding Distance/Origin to Destination Distance | the result of this formula is 1 or greater | there is at least one transfer from origin to boarding |  | No |
|  | Origin to Boarding Distance/Origin to Destination Distance | the result of this formula is 1 or greater | Access Mode - ANY USE OF A VEHICLE (ie, dropped off, rode with others, drove, taxi...) |  | No |
|  | Origin to Boarding Distance/Origin to Destination Distance | the result of this formula is 1 or greater | Access Mode Walk/Wheelchair/Skateboard | There are no transfers from origin to boarding | Yes |
| Alighting to <br> Destination divided by <br> Origin to Destination | Alighting to Destination Distance/Origin to Destination Distance | the result of this formula is 1 or greater | there is at least one transfer from alighting to destination |  | No |
|  | Alighting to Destination Distance/Origin to Destination Distance | the result of this formula is 1 or greater | Egress Mode - ANY USE OF A VEHICLE(ie, will get picked up, ride with others, drive, taxi...) |  | No |
|  | Alighting to Destination Distance/Origin to Destination Distance | the result of this formula is 1 or greater | Egress Mode Walk/Wheelchair/Skateboard | There are no transfers from alighting to destination | Yes |

## Transit Review Team (TRT)

ETC Institute has a dedicated team whose priority is reviewing and editing completed records through the use of an online visual review tool. One of their other key responsibilities is the process of calling and completing "Callback" surveys. Callback surveys are surveys that are unable to be completed in the field. The "Callback" is conducted within a few days of when the initial survey began so that the information of the trip can be more easily recalled by the respondent.

The TRT reviews all complete records collected for the survey, paying special attention to records that are automatically flagged by the online visual review tool. Prior to making edits to any survey, they first attempt to contact the respondent to clarify any questionable answer choices regarding the trip. If no contact is made, or if contact is not possible, the following actions are taken.

## Pre-Processing General Issues and Actions

Table 16 below describes the general issues that could occur within a trip where changes may have been appropriate.

Table 16: Pre-Processing General Issues

| Issue | Description of Issue | Action |
| :---: | :---: | :---: |
| Origin/Destination Issue - 1 | Origin/Destination appears incorrect because the wrong location of a multiple-location organization was selected | If for example, an Origin/Destination appears illogical based on the college campus that was selected, but an appropriate campus of the same college does appear logical given the other points and answer choices of the trip, then the appropriate campus will be selected. |
| Origin/Destination Issue - 2 | Origin/Destination appears to have been geocoded to the incorrect city/state | If for example, an Origin/Destination appears illogical based on the city/state that was geocoded, but the address/intersection is logical within the trip if the city/state are changed. This occurs occasionally because the surveyor selects the wrong choice from the list of possible address choices that appear in the online survey instrument, then the appropriate address information will be inserted. |
| Access/Egress Mode | Access/Egress Mode seems illogical based on trip | If the access/egress mode involves the use of a vehicle and the distance from either origin to boarding or alighting to destination is less than .2 miles then the access/egress mode is recoded to walk/walked and that change will be reflected in the database. Unless the terrain of the area makes walking unlikely. |
| Directionality of Record | Boarding and alighting locations indicate that the trip is going in the opposite direction of what was selected by the surveyor. | Change Direction of Route Selected and if necessary update boarding and alighting locations based on appropriate direction. |

## Transfer Issues and Actions

Table 17 below describes the transfer issues that could occur within a trip where changes may have been appropriate.
Table 17: Transfer Issues and Actions

| Issue \# | Description of Issue | Action |
| :---: | :---: | :---: |
| Transfer Issue - 1 | The transfer(s) seems illogical based on either the origin to boarding or alighting to destination | If the transfer appears to have been selected incorrectly based on surveyor misselection/passenger error then an appropriate transfer(s) will be inserted based on the geocoded points of the trip, the time of day of the trip and the direction of travel. If no appropriate transfers can be found, then the record will be removed from the database. |
| Transfer Issue - 2 | The transfer(s) seems unnessary based on either the origin to boarding or alighting to destination | If the transfer(s) appears to be unnecessary because the distance from the origin to boarding or alighting to destination is less than 0.2 miles then the trip will be reviewed in further detail to determine if the transfer(s) are inappropriate. Aspects that wil determine appropriateness are: the terrain ( 0.1 miles for example is a very short distance but a river inbetween the origin and boarding location could require an individual to use a transfer as opposed to being able to walk), disability, age, and alternate access/egress modes (IE if someone indicates walking 1 mile from origin to boarding but then indicates taking 2 transfers from alighting to destination to travel a total of 0.1 miles they have likely indicated transfers for a future trip later in the day). NOTE: The 0.2 distance is only used as guideline to create a flag for closer review. Typically only extreme distances have transfers removed. |
| Transfer Issue - 3 | The passenger indicated that they did not use a transfer but based on their access/egress mode and the distance between either the origin to boarding or alighting to destination suggests that a transfer was likely used. | If the access/egress mode is "walked/walk" and no transfer is indicated, and the distance between either origin to boarding or alighting to destination is greater than 2 miles, then an appropriate transfer(s) will be inserted based on the geocoded points of the trip, the time of day of the trip and the direction of travel. If no appropriate transfers can be found, then the record will be removed from the database. |
| Transfer Issue - 4 | Duplicate Transfers in the Route Path | If duplicate transfers exist in the route path, the path is reviewed to determine which route(s) were incorrectly entered. If a review of the record suggests that the transfer route(s) is/are unneccesary then they will be removed. If the transfers suggest that trip is a round trip and not a one-way trip then the record will be removed from the database. |

## Post-Processing Additional Checks

After all records are reviewed by the TRT, the next step in this process involved the application of a series of QA/QC "non-trip" checks. Non-trip checks are described as anything not pertaining to the respondent's actual trip, i.e. demographic information.

Non-trip related checks included:

- Ensuring the respondents who indicated that they are employed also reported that at least one member of their household is employed.
- Ensuring the time of day a survey is completed and reasonable given the published operating schedule for the route.
- Ensuring that the appropriate fare type is used in response to the age of respondent.
- Checking that there is a representative demographic distribution based on age, gender, and income status.
- Removing any personal contact information used for quality control purposes during the data collection portion of the project in order to protect the anonymity of the respondents.

Once all records go through the pre-processing and post-processing QA/QC checks, those that are deemed complete and usable are then used to update the completion report used by the FS to ensure that all contractual goals have been met. After the final high-level review is completed, metadata (a codebook) is created in order to suitably explain the data in the database.

## Process for Identifying Complete Records

To classify a survey as being complete, the record must contain all elements of the one-way trip, including complete answers to the following:

- Route/direction
- Time of trip
- All transfer routes used
- Home address
- Origin address
- Destination address
- Origin place type
- Destination place type
- Access mode
- Egress mode
- Boarding location
- Alighting location

In addition to the required trip data questions, a survey must be marked as complete by the online survey program, which occurs only if the interviewer has navigated through every required question on the online survey instrument including demographic questions.

## CHAPTER 3: SURVEY WEIGHTING AND EXPANSION

The North Central Texas regional transit interviews were expanded by route, direction, time-of-day for routes without Automated Passenger Count (APC data). For routes and lines with APC data, the surveys were also expanded by segments containing the boarding and corresponding alighting location of the rider. The following sections describe the methodology that was used to develop the unlinked expansion factors. Unlinked expansion factors are weights, when summed up, match the daily ridership of the system.

## Data Expansion Overview

When survey quantity goals are created, they are typically based upon a percentage of the average weekday ridership for the routes in the system and desired confidence levels. These are further broken down by time periods and directions. If the route has been deemed a circular or loop route, the ridership is broken down into time periods only, as directional components cannot be obtained accurately. These routes are deemed circular or loop routes because many riders that will board going in one "direction" but alight going the other "direction" due to the functionality of the route. The six time periods for this survey, shown in Figure 2, were created based off the specific needs of NCTCOG, DART, DCTA, and Trinity Metro. Once a sample percentage is agreed upon, the goals for the survey collection are based off the ridership for each route by time period and direction then multiplied by the sampling percentage. The purpose of developing survey quantity goals is to collect an appropriate number of survey records that will be expanded to represent the total average weekday ridership of each route by time period and direction.

To further increase the specificity of the expansion process, segments were created for each route with APC data. The reason for that is you can only accurately determine the flows between two segments when you have APC data. Stops were grouped into segments along that route so that boarding segments could be paired with alighting segments when creating the expansion factor. When a route is segmented in half, you have the possibility of three boarding to alighting cell combinations: board segment 1 to alight segment 1, board segment 1 to alight segment 2, board segment 2 to alight segment 2 .Routes with stoplevel ridership data were separated based on direction and then each direction was divided into two segments based on the total boardings. Starting from the beginning end of a route in one direction, stops are added to the first segment as cumulative boardings are calculated. After approximately half of the route's total ridership in that direction was accounted for, a new segment was created. Table 18 is a simplified example of segmentation with stop-level ridership.

Table 18: Segmentation with Stop-Level Ridership Example

| Segmentation with APC Example |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Direction: <br> Eastbound | APC DATA |  | Segmentation |  |  |
| Stops | Boardings | Alightings | Running Total of Boardings | Running Percentage of Total Boardings | Segment |
| Stop 1 | 35 | 0 | 35 | 23.0\% | 1 |
| Stop 2 | 5 | 10 | 40 | 26.3\% | 1 |
| Stop 3 | 4 | 5 | 44 | 28.9\% | 1 |
| Stop 4 | 19 | 10 | 63 | 41.4\% | 1 |
| Stop 5 | 12 | 12 | 75 | 49.3\% | 1 |
| Stop 6 | 20 | 4 | 95 | 62.5\% | 2 |
| Stop 7 | 20 | 4 | 115 | 75.7\% | 2 |
| Stop 8 | 15 | 3 | 130 | 85.5\% | 2 |
| Stop 9 | 15 | 5 | 145 | 95.4\% | 2 |
| Stop 10 | 3 | 10 | 148 | 97.4\% | 2 |
| Stop 11 | 2 | 15 | 150 | 98.7\% | 2 |
| Stop 12 | 2 | 11 | 152 | 100.0\% | 2 |
| Stop 13 | 0 | 10 | 152 | 100.0\% | 2 |
| Stop 14 | 0 | 15 | 152 | 100.0\% | 2 |
| Stop 15 | 0 | 38 | 152 | 100.0\% | 2 |
|  | 152 | 152 |  |  |  |

## Types of Data Expansion

The type of data expansion conducted depended on the data available for the specific route. There were three types of data that created the combinations that guided the type of expansion used: Stop-Level Ridership/APC Data (from NCTCOG, DART, DCTA, and Trinity Metro), O2O counts data (collected by ETC), and OD Survey Data (collected by ETC). Figure 8 shows the data combinations, the corresponding route segmentation, and type of expansion used.

Figure 5: Types of Data Expansion

Iterative Proportional Fitting (IPF) is used in multiple types of expansion discussed later in this section. For IPF to work properly, the boarding totals must match the alighting totals. For this reason, through the process of normalization, ridership alightings are adjusted using a multiplying factor (\% of alighting per station/stop) to make sure their totals match the boarding totals. These are typically nominal alterations; however, if there are significant differences in boarding and alighting totals by direction of a route, it may require additional review of the functionality of the route (removing directional components and deeming the route circular or loop) to ensure that the surveys are both collected and expanded appropriately.

## Type 1 Expansion: Rail Routes with APC Data, 020 Counts, and OD Survey Data <br> Of the four types of bus expansion discussed, Type 1 Expansion is the preferred method as it incorporates all three types of data that were available. Type 1 expansion was used for rail. The rail segments were then appended to both the O2O and OD data based on the boarding and alighting locations. Figure 8 explains the methodology for Type 1 expansion.

Figure 6: Type 1 Expansion/Rail Expansion

The process for how the data was expanded in Type 1 Expansion is explained below.
Table 19 shows Table 1 expansion process, the segmented results for the O2O counts that were administered for a route, station/stop, direction, and time period. Each row in the table identifies the segment where passengers boarded the route. The columns in the table identify the segments where people alighted the route. Table 20 shows an example of the boarding and alighting segment location of the tables within the expansion process.

Table 19: Table Example for Boarding/Alighting Segment locations

For example, 15 of the O 2 O counts had riders board in segment 1 and alight in segment 2.
Table 20: Rail Data Expansion Table Results of 020 Counts

## TABLE 1: RESULTS OF THE ON-TO-OFF SURVEY

| Route: Example Eastbound (6am-9am) |  |  |  |
| :---: | :---: | :---: | :---: |
| Segment | Total | 1 | 2 |
| 1 | 20 | 5 | 15 |
| 2 | 25 |  | 25 |
| Total | 45 | 5 | 40 |

Table 21 shows the Table 2 expansion process, the distribution of the data in Table 19 [Table 1 Expansion Process] expressed as a percentage of all boardings for the specific time period and direction. Table 9 was created by dividing each O 2 O cell in Table 19 [Table 1 Expansion Process] by the sum of all O 2 O counts in Table 20 [Table 1 Expansion Process], which is 45. For example, 15/45 (33.3\% of all trips boarded in segment 1 and alighted in segment 2 is shown in Table 21 [Table 2 Expansion Process].

Table 21: Rail Data Expansion Table Distribution of O2O Counts

| TABLE 2: DISTRIBUTION OF THE ON-TO-OFF SURVEY |  |  |  |
| :---: | :---: | :---: | :---: |
| Route: Example Eastbound (6am-9am) | PERCENTAGE OF THE DISTRIBUTION OF RIDERSHIP <br> COUNTS FROM ON/OFF SURVEY |  |  |
| Segment | Total | 1 | 2 |
| 1 | $\mathbf{4 4 . 4 \%}$ | $11.1 \%$ | $33.3 \%$ |
| 2 | $55.6 \%$ |  | $55.6 \%$ |
| Total | $\mathbf{1 0 0 . 0 \%}$ | $\mathbf{1 1 . 1 \%}$ | $\mathbf{8 8 . 9 \%}$ |

The total ridership for the route, time period, and direction was applied to the O 2 O distribution percentages shown in Table 21 [Table 2 Expansion Process].

This produces an estimate of the ridership flow for the boarding segment to the alighting segment as shown in Table 22 [Table 3 Expansion Process]. Applying the actual ridership of 320, obtained from the APC data, creates an initial estimate of 107 trips ( $33.3 \% \times 320$ ) boarding in segment 1 and alighting in segment 2.

Table 22: Rail Data Expansion Table Initial Estimate of Ridership Flows between Segments

| TABLE 3: INITIAL ESTIMATE OF RIDERSHIP FLOWS BETWEEN STATION |  |  |  |
| :---: | :---: | :---: | :---: |
| (PERCENTAGES IN TABLE 2 WERE APPLIED TO THE TOTAL BOARDINGS FOR THIS TIME PERIOD FOR THIS DIRECTION) |  |  |  |
| Route: Example Eastbound (6am-9am) |  | PROJECTED RIDER | surve |
| Segment | Total | 1 | 2 |
| 1 | 142 | 36 | 107 |
| 2 | 178 |  | 178 |
| Total | 320 | 36 | 284 |

In order to develop a more accurate estimate of the ridership flows between segments on each route, ETC developed an IPF algorithm to balance the differences between the ridership projected from the 020 counts (shown in Table 22 [Table 3 Expansion Process]) and the APC ridership for each segment (shown in Table 23 [Table 4 Expansion Process]). The IPF process is described below.

Table 23: Stop-LeVel Ridership/APC Data

| TABLE 4: BOARDINGS AND ALIGHTINGS BY STATION |  |  |  |
| :--- | :---: | :---: | :---: |
| Route: Example Eastbound (6am-9am) |  |  |  |
| Average Weekday <br> Ridership | Total | 1 | 2 |
| BOARDINGS | 320 | 100 | 220 |
| ALIGHTINGS | 320 | 20 | 300 |
| DIFFERENCE FROM PROJECTED |  |  |  |
| BOARDINGS | 0 | -42 | 42 |
| ALIGHTINGS | 0 | -16 | 16 |

Step 1: Correction for the Boardings. The estimated ridership from the O 2 O counts for each route (as shown in Table 22 [Table 3 Expansion Process]) was multiplied by the ratio of the actual boardings from Stop-Level Ridership/APC Data for each segment by the estimated boardings for each segment. For example, if the actual boardings for segment 1 were 120 and the estimated boardings were 100, each cell associated with segment 1 would have been multiplied by $1.2(120 / 100)$ to adjust the estimated boardings to actual boardings.

Step 2: Correction for the Alighting. Once the correction in Step 1 was applied, the estimated boardings would be equal to the actual boardings. However, the adjustment to the boarding totals may have changed the alighting estimates. To correct the alighting estimates, the new values calculated in Step 1 were adjusted by multiplying the ratio of the actual alighting from the Stop-Level Ridership/APC Data for each stop by the estimated alighting for each segment from Step 1. For example, if the actual alighting for segment 2 were 220 and the estimated alighting from Step 1 was 200, each cell associated with Segment 2 would have been multiplied by $1.1(220 / 200)$ to adjust the estimated alighting from Step 1 to actual alighting.

The processes described in Steps 1 and 2 were repeated sequentially until the difference between the actual and estimated boarding and alighting were zero. Table 24 [Table 5 Expansion Process] shows that after seven balancing iterations in this algorithm, there were no differences between the projected distribution and the actual boarding and alighting stops.

Table 24: Iterative Balance Process
TABLE 5: ITERATIVE BALANCING PROCESS

| 4th STEP of ITERATIVE baLANCING TO CORRECT DISTRIBUTION OF RIDERSHIP BY ALIGHTING LOCATION |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Stop Name | Total | DIFFERENCE FROM <br> ACTUAL BOARDINGS | 1 | 2 |  |
| 1 | 100 | 0 | 20 | 80 |  |
| 2 | 220 | 0 | 0 | 220 |  |
| Total | 320 | 0 | 20 | 300 |  |
| DIFFERENCE FROM <br> ACTUAL ALIGHTINGS | 0 |  | 0 | 0 |  |

4th STEP of ITERATIVE BALANCING TO CORRECT DISTRIBUTION OF RIDERSHIP BY BOARDING LOCATION

| Stop Name | Total | DIFFERENCE FROM <br> ACTUAL BOARDINGS | 1 | 2 |
| :--- | :---: | :---: | :---: | :---: |
| 1 | 100 | 0 | 20 | 80 |
| 2 | 220 | 0 | 0 | 220 |
| Total | 320 | 0 | 20 | 300 |
| DIFFERENCE FROM <br> ACTUAL ALIGHTINGS | 0 |  | 0 | 0 |

The final estimate for ridership flows is shown in Table 25 [Table 6 Expansion Process].

Table 25: Final Estimate of Ridership Flows between Stations

## TABLE 6: FINAL ESTIMATE OF RIDERSHIP FLOWS BETWEEN STATIONS

Route: Example Eastbound (6am-9am)

| Total | 1 | 2 |  |
| :---: | :---: | :---: | :---: |
| 1 | 100 | 20 | 80 |
| 2 | 220 |  | 220 |
| Total | 320 | 20 | 300 |

The actual number of OD records completed for each boarding to alighting segment pair is shown in Table 26 [Table 7 Expansion Process]. To calculate the expansion factors, the final estimate of ridership between segments shown in Table 25 [Table 6 Expansion Process] was divided by the actual number of OD records collected, as shown in Table 26 [Table 7 Expansion Process]. This calculation produces the expansion factors shown in Table 27 [Table 8 Expansion Process]. For example, the 80 estimated riders projected to board in segment 1 and alight in segment 2 were divided by the 9 OD records to produce an expansion factor of 8.89 to be applied to records who board in segment 1 and alighting in segment 2 during the example Eastbound (6-9 a.m.) Time Period as shown in Table 27 [Table 8 Expansion Process].

Table 26: Number of Completed Surveys

| TABLE 7: NUMBER OF COMPLETED SURVEYS |  |  |  |
| :---: | :---: | :---: | :---: |
| Route: Example Eastbound (6am-9am) |  |  |  |
| Segment | Total | 1 | 2 |
| 1 | $\mathbf{1 1}$ | 2 | 9 |
| 2 | $\mathbf{2 3}$ |  | 23 |
| Total | $\mathbf{3 4}$ | $\mathbf{2}$ | $\mathbf{3 2}$ |

Table 27: Weighting Factors

## TABLE 8: WEIGHTING FACTORS

Route: Example Eastbound (6am-9am)

| Segment | Total | 1 | 2 |
| :---: | :---: | :---: | :---: |
| 1 | 19 | 10.00 | 8.89 |
| 2 | 10 |  | 9.57 |
| Total | $\mathbf{2 8}$ | $\mathbf{1 0}$ | $\mathbf{1 8}$ |

## Type 2 Expansion: Bus Routes with APC Data, OD Survey Data, but No 020 Counts Data

Bus routes with no O 2 O counts but with APC data were expanded with Type 2 expansion. This type of expansion also divided stops into two segments based on total boarding distribution by direction. These segments were then appended to the OD records based on the boarding and alighting locations. The expansion method is exactly like Type 1 expansion, with the only difference being that the distribution of OD records was substituted for the O 2 O counts data. The Bus expansion for non-high ridership routes was conducted this way. The figure below explains the methodology for Type 2 expansion.

Figure 7: Type 2 Expansion/Rail Expansion

## Type 2 Expansion

## Routes Segmented into twos by APC Boarding Totals

> Iterative Proportional Fitting (IPF) is conducted using
> boarding and alighting information from the Origin Destination Survey (OD) and APC Boarding and Alighting
> Totals. Expansion Factors are determined based on IPF
> estimate of ridership and main survey records collected.

## Type 3 Expansion: Bus Routes with 020 Counts and OD Survey Data,

 but without Stop-Level Ridership/APC DataExpansion Type 3 is used for routes where 020 counts are collected but Stop-Level Ridership/APC Data is not available. Routes without Stop-Level Ridership/APC Data are segmented into three segments based
on number of stops along a route. These segments were then appended to the O2O and OD Survey databases. The expansion method is less complex than the two previously discussed types of expansion. Type 3 expansion was not used for this project.

## Type 4 Expansion: Bus Routes with OD Survey Data, without 020 Counts Data or Stop-Level Ridership/APC Data

For routes that only have OD Survey data, Type 4 expansion is used. This method was used for all of the non-APC/O2O systems. Routes in these systems were expanded at the route level by direction and time of day based on daily ridership reported by the agencies.

Figure 8: Type 4 Expansion

## Type 4 Expansion

Iterative Proportional Fitting (IPF) is not available because there is no Stop-Level
Ridership/APC Data to "balance" On-to-Off counts. So, the percentage distribution from the Origin Destination (OD) survey is taken and multiplied by the ridership for that time period and direction. Expansion Factors are determined based on this multiplied estimate and main survey records collected.

Type 4: Expansion Methodology for Bus Routes with OD Survey Data, without On-to-Off Counts or StopLevel Ridership / APC Data

Figure 7-23 shows the segmented results from the OD survey that replaced the on-to-off counts. Each row in the table identifies the segment where passengers boarded the bus. The columns in the table identify the segments where people alighted. For example, 7 of the OD surveys had riders board in segment 2 and alight in segment 3.

Figure 9: Bus Data Expansion Table Results of On-to-Off Counts

| TABLE 1: Main Survey <br> (Replacing On-to-Off Results) | Results | Total Boardings this Direction During this Time Period $=$ |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Route: Example Eastbound (6-9am) | DISTRIBUTION OF COMPLETED ON2OFF SURVEYS |  |  |  |
| Segment |  | 1 | 2 | 3 |
| 1 | 16 | 4 | 4 | 8 |
| 2 | 10 |  | 3 | 7 |
| 3 | 4 |  |  | 4 |
| Total | 30 | 4 | 7 | 19 |

Figure 10 shows the distribution of the data in Figure 9 as a percentage of all boardings for the route. Figure 10 was created by dividing each on-to-off cell in Figure 9 by the sum of all OD records in Figure 9, which is 30 . For example, $7 / 30$ ( $23.33 \%$ ) of all trips boarded in segment 2 and alighted in segment 3 as shown in Figure 10.

Figure 10: Bus Data Expansion Table Distribution of On-to-Off Counts

| Route: Example Eastbound (6-9am) | DIITRIBUTION OF ON2OFF SURVEYS AS \% OF ALL COMPLETED ON2OFF SURVEYS |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Segment |  | 1 | 2 | 3 |
| 1 | 53.33\% | 13.33\% | 13.33\% | 26.67\% |
| 2 | 33.33\% | 0.00\% | 10.00\% | 23.33\% |
| 3 | 13.33\% | 0.00\% | 0.00\% | 13.33\% |
| Total | 100\% | 13.33\% | 23.33\% | 63.33\% |

The total ridership for the route, time period, and direction was applied to the on-to-off distribution shown in Figure 12. This produced an estimate of the ridership flow on the route based on the boarding segment to the alighting segment as shown in Figure 13. Applying the actual ridership of 300 to the distribution created an estimate that 70 trips $(23.33 \% \times 300)$ board in segment 2 and alight in segment 3 .

Figure 11: Bus Data Expansion Table Initial Estimate of Ridership Flows Between Segments
TABLE 3: ESTIMATE OF RIDERSHIP FLOWS BETWEEN SEGMENTS
(percentages in table 2 were applied to the total boardings for this time period in this direction)
Route: Example Eastbound (6-9am) ESTIMATED RIDERSHIP BASED ON THE ON-TO-OFF SURVEY

| Segment | $\mathbf{1}$ |  |  |  |  | $\mathbf{2}$ |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 160 | 40 | 40 | 80 |  |  |
|  | 100 | 0 | 30 | 70 |  |  |
| 3 | 40 | 0 | 0 | 40 |  |  |
| Total | 300 | 40 | 70 | 190 |  |  |

The actual number of OD records that were completed for each boarding-to-alighting segment pair is shown in Figure 12. To calculate the expansion factors, the estimate of ridership between segments, shown in Figure 11, was divided by the actual number of OD records that were completed between segments shown in Figure 12. This calculation produced the expansion factors shown in Figure 13. The 70 estimated riders were divided by the 7 completed OD records to produce a factor of 10.00 to be applied to riders who boarded in segment 2 and alighted in segment 3 as shown in Figure 13.

Figure 12: Number of Completed Surveys

| TABLE 4: NUMBER OF CO INTERCEPT SURVEYS | MPLETED | Total Number of Surveys $=\mathbf{3 0}$ |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Route: Example Eastbound (6-9am) | NUMBER OF COMPLETED SURVEYS |  |  |  |
| Segment |  | 1 | 2 | 3 |
| 1 | 16 | 4 | 4 | 8 |
| 2 | 10 |  | 3 | 7 |
| 3 | 4 |  |  | 4 |
| Total | 30 | 4 | 7 | 19 |

Figure 13: Weighting Factors

| TABLE 5: Weighting Factors |  |  |  |  |
| ---: | :---: | :---: | :---: | :---: |
| Route: Example Eastbound (6-9am) |  |  |  |  |
| Segment |  | 1 | 2 | 3 |
| 1 | 10.00 | 10.00 | 10.00 | 10.00 |
| 2 | 10.00 |  | 10.00 | 10.00 |
| 3 | 10.00 |  |  | 10.00 |
| Total | 10.00 | 10.00 | 10.00 | 10.00 |

Once all the expansion factors were calculated, each factor was applied to all surveys with the same route, direction, time-of-day, boarding segment, and alighting segment.

## Types of Data Expansion Breakdown

The table below shows the type of expansion used project routes. Appendix D contains a list containing each route and the type of expansion used.

Figure 14: Types of Data Expansion

| Expansion Type | Routes | (\%) Routes |
| :---: | :---: | :---: |
| EXPANSION \#1 | 27 | $17.2 \%$ |
| EXPANSION \#2 | 70 | $44.6 \%$ |
| EXPANSION \#3 | 0 | $0.0 \%$ |
| EXPANSION \#4 | 60 | $38.2 \%$ |
| Grand Total | $\mathbf{1 5 7}$ | $\mathbf{1 0 0 . 0 \%}$ |

## General Rule for Expansion Factors

While there are no specific guidelines for the expansion factor values, ETC tries to keep expansion factors below three times the average expansion factor. This adjustment is made to keep any one record from representing a markedly high number of riders in the system. The formula for determining this guideline is:

Guideline Weight Factor $=1 /$ (Sampling percent) $\times 3$
If the expansion factor for a boarding segment to alighting segment pair is greater than three times the average expansion factor, then it is aggregated into the adjacent boarding-to-alighting segment where it
will have the least impact on the previously existing expansion factors. This guideline is used for all the expansion types.

NCTCOG also imposed a rule that there should be approximately 10 samples for each expansion cell; otherwise, the expansion cell should be collapsed to merge time of day, direction, or segments or routes into a cluster where needed.

The data expansion above produces the unlinked weight factor for each record. The unlinked weight factor matches the daily ridership on the system.

## Linked Trip Expansion Factors for All Records

While the unlinked weight factor counts each boarding as a separate trip regardless of transfers, the linked-trip weight factor requires transfers be included in the trip, which helps to account for the number of transfers that were made by each passenger reducing the daily ridership because a single passenger can account for multiple unlinked ridership. Linked expansion factors are generated after the unlinked expansion factors are created.

## Linked Trip Multiplying Factor

First, you must calculate the Multiplying Factor for each survey record which is related to the number of transfers in the corresponding record. The equation to create the Multiplying Factor is shown below:

## Linked Trip Multiplying Factor = [1/(1 + \# of transfers)]

If a passenger did not make a transfer, the linked trip multiplying factor would be 1.0 because the person would have only boarded one vehicle. If a person made two transfers, the linked trip expansion factor would be 0.33 because the person would have boarded three transit vehicles during his/her one-way trip. An example of how the linked trip expansion factors were calculated is provided in Figure 15.

Figure 15: Sample Calculations of Linked Trip Multiplying Factors

| Number of Transfers | Calculation <br> $[\mathbf{1} /(1+$ Number of <br> Transfers $)]$ | Linked Trip <br> Multiplying Factor |
| :---: | :---: | :---: |
| 0 | $[1 /(1+0)]$ | 1 |
| 1 | $[1 /(1+1)]$ | 0.5 |
| 2 | $[1 /(1+2)]$ | 0.33 |
| 3 | $[1 /(1+3)]$ | 0.25 |

## Linked Trip Weight Factor

Once the linked trip multiplying factor of a survey record is determined, one can calculate the linked trip weight factor. The linked trip weight factor is found by taking the product of the unlinked trip weight factor by the linked trip Multiplying Factor and is shown in the equation below.

Linked Trip Weight Factor = Unlinked Trip Weight Factor x Linked Trip Multiplying Factor

## CHAPTER 4: REGIONAL ANALYSIS (OD)

The following chapter highlights demographic and trip-related survey findings from the project for riders surveyed on all NCT services that were part of the 22-23 North Central Texas Regional Transit Onboard Survey. Two major categories of survey findings are presented: ridership profile and trip profile.

For each data category, findings are shown though six tables: regional total and then the five service types of Local Bus, Express Bus, Commuter Rail, Light Rail, and Streetcar. The findings in this section were expanded using the Unlinked Weight Factors in the database.

## Regional Overall Ridership Profile

This section lists tables of weighted and unweighted data for rider characteristics across all DART, Trinity Metro, DCTA, and TRE fixed bus routes and rail lines.

## Gender

Table 28A: Gender - Regional
Surveyed ridership is approximately $42 \%$ female and $58 \%$ male. Less than $1 \%$ identified as something other than male or female or refused to answer.

| Gender | Count | \% Count | Weight | \% Weight |
| :--- | ---: | ---: | ---: | ---: |
| Female | 13,828 | $41.9 \%$ | 71,818 | $41.5 \%$ |

## CHAPTER 5: REGIONAL SURVEY SUMMARY BY SERVICE TYPE (OD)

This chapter lists tables of weighted data for rider characteristics across all DART, Trinity Metro, DCTA, and TRE fixed route bus and rail lines. Each table summarizes the five types of service and the regional total.

## Regional Rider Profile Summary by Service Type

table 64: Gender by Service Type (\% Weighted Value)

| Gender | LOCAL BUS | EXPRESS BUS | COMMUTER RAIL | LIGHT RAIL | STREETCAR | TOTAL |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Female | 43.2\% | 46.0\% | 41.5\% | 38.2\% | 45.4\% | 41.5\% |
| Male | 56.6\% | 54.0\% | 58.3\% | 61.5\% | 54.6\% | 58.3\% |
| Other | 0.2\% | 0.0\% | 0.2\% | 0.1\% | 0.0\% | 0.1\% |
| Refused/No Answer | 0.1\% | 0.0\% | 0.0\% | 0.1\% | 0.0\% | 0.1\% |
| Grand Total | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% |

Table 65: Age by Service Type (\% Weighted Value)

| Age | LOCAL BUS | EXPRESS BUS | COMMUTER RAIL | LIGHT RAIL | STREETCAR | TOTAL |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Under 18 | 2.0\% | 0.4\% | 0.3\% | 1.6\% | 1.2\% | 1.8\% |
| 18-19 | 7.1\% | 2.4\% | 2.8\% | 3.4\% | 1.1\% | 5.6\% |
| 20-24 | 23.9\% | 7.8\% | 16.9\% | 15.6\% | 16.1\% | 20.6\% |

## Regional Trip Profile by Service Type

This section lists tables of weighted data for trip characteristics across all DART, Trinity Metro, DCTA, and TRE fixed route bus and rail lines. It has been broken out by the five types of service.

Table 82: Trip Purpose by Service Type (\% Weighted Value)

| Trip Purpose | LOCAL BUS | EXPRESS BUS | COMMUTER RAIL | LIGHT RAIL | STREETCAR | TOTAL |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Home-Based Accompany | 0.8\% | 0.7\% | 0.2\% | 0.2\% | 0.0\% | 0.6\% |
| Home-Based Airport | 0.2\% | 0.3\% | 5.2\% | 1.0\% | 0.0\% | 0.7\% |
| Home-Based Eating Out | 4.0\% | 1.9\% | 3.1\% | 3.1\% | 9.4\% | 3.7\% |
| Home-Based Education College | 14.3\% | 2.9\% | 9.2\% | 3.4\% | 1.3\% | 10.2\% |
| Home-Based Education K-12 | 1.7\% | 0.3\% | 0.0\% | 1.0\% | 0.2\% | 1.4\% |
| Home-Based Other | 0.0\% | 0.0\% | 0.0\% | 0.1\% | 0.0\% | 0.0\% |
| Home-Based Personal | 10.6\% | 3.0\% | 5.1\% | 9.4\% | 4.2\% | 9.9\% |
| Home-Based Shopping | 7.7\% | 0.6\% | 1.3\% | 3.9\% | 4.8\% | 6.1\% |
| Home-Based Social/Recreation | 9.0\% | 2.0\% | 10.7\% | 12.4\% | 14.0\% | 10.2\% |
| Home-Based Work | 43.9\% | 86.1\% | 54.1\% | 55.9\% | 31.1\% | 48.6\% |
| Non-Home-Based Other | 4.7\% | 1.7\% | 8.3\% | 6.5\% | 23.6\% | 5.5\% |
| Non-Home-Based Work | 2.9\% | 0.5\% | 2.8\% | 3.1\% | 11.3\% | 3.0\% |
| Grand Total | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% |

Table 83: Trip Mode by Service Type (\% Weighted Value)

| Transit Trip Mode | LOCAL BUS | EXPRESS BUS | COMMUTER RAIL | LIGHT RAIL | STREETCAR | TOTAL |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bus Only | 78.8\% | 92.4\% | 0.0\% | 0.0\% | 79.1\% | 49.0\% |
| Bus/Rail | 21.2\% | 7.6\% | 19.7\% | 39.6\% | 20.9\% | 27.3\% |

NCT Regional Transit Onboard Origin-Destination Survey • 2022-2023

| Transit Trip Mode | LOCAL BUS | EXPRESS BUS | COMMUTER RAIL | LIGHT RAIL | STREETCAR | TOTAL |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rail Only | 0.0\% | 0.0\% | 80.3\% | 60.4\% | 0.0\% | 23.7\% |

## CHAPTER 6: Regional Mobility On-Demand

## Overview

In addition to a survey of fixed bus route and rail line services, the 2022-2023 North Central Texas Onboard Survey project included a survey of available Mobility On-Demand services. Mobility On-Demand is defined as tech-enabled shared transportation that lives in the space between traditional fixed route transit and ride hailing technology. Mobility On-Demand routes are nimble; their "schedules" are not fixed, as they shift constantly based on rider demand. The transit vehicles for this service range in size and include cars, vans, shuttles, and buses.

ETC Institute conducted a self-administered version of the Origin-Destination survey to riders using Mobility On-Demand services of the transit agencies participating in the fixed route OD survey. GoLink (DART), GoZone (DCTA), ZIPZONE (Trinity Metro), and Arlington Via are the services included in this survey. The on-demand zone coverage is shown in Figure 18.

Figure 18: Mobility On-Demand Service Map for DART, DCTA, Trinity Metro, and Arlington

The purpose of the survey was to learn more about the weekday travel patterns of Mobility On-Demand and how they use the services. The survey was designed to collect one-way trip details, location data, fare and payment information, person and household demographic information. The survey instrument closely followed the format of the 2022-2023 North Central Texas Regional Onboard survey, so the results could be compared with the fixed route survey. Each agency was asked to review the fixed route survey instrument, provide appropriate fare and payment options, and suggest questions that could be included. The main changes were the inclusion of different fare and payment modified for each transit agency and the rider's need for special assistance options. The final survey instrument(s) and online survey screens are provided in Appendix F and Appendix G respectively. The final data definition table is provided in Appendix H.

The goal of the survey was to collect $10 \%$ of the total average weekday ridership on the on-demand services. The target ridership for all Mobility On-Demand services totaled 8,833. 1,534 surveys were collected across the four agencies. The details by agency are shown in Table 99.

Table 99: Mobility On-Demand Zones and Surveys Collected

| Mobility On-Demand Service | Zones <br> Surveyed | Total <br> Ridership | Surveys <br> Collected |
| :--- | ---: | ---: | ---: |
| Arlington Via | 1 | 2,578 | 462 |
| Dallas Area Rapid Transit (DART) GoLink | 34 | 3,864 | 408 |
| Denton County Transportation Authority (DCTA) GoZone | 2 | 2,015 | 531 |
| Trinity Metro ZIPZONES | 23 | 376 | 133 |
| All Systems Combined | 60 | $\mathbf{8 , 8 3 3}$ | $\mathbf{1 , 5 3 4}$ |

GoZone, ZIPZONE, and Arlington Via were surveyed in fall 2022 and GoLink was surveyed in spring 2023. This chapter will provide details of the two data collections, data processing, and a regional analysis of the data.

## Fall 2022 Data Collection

In fall 22, DCTA, Trinity Metro, and Arlington Transportation worked together to have a common approach to the Mobility On-Demand data collection. At the time, all three services made use of Via to operate their Mobility On-Demand service that were included in the survey, so streamlining the survey for GoZone, ZIPZONE, and Arlington Via was, Trinity Metro, and Arlington Transportation was also logical.

When evaluating the best way to invite riders to the survey, the project team reviewed how people booked their rides. Only 5\% or less of total ridership of GoZone, ZIPZONE, and Arlington Via booked through the phone, so the recruitment efforts focused on phone app users.

Working with Via, the Origin and Destination (OD) survey recruitment included messaging through each agency's Mobility On-Demand app and electronic mail (email). The messages used the followed stages of booking through the app:

- After completing a trip booked through the app, a rider would receive an in-app message inviting them to participate in the survey and including a link to the agency's Mobility On-Demand survey.
- Two days after completing a trip booked through the app, a rider would receive an in-app message inviting them to participate in the survey and including a link to the agency's Mobility On-Demand survey.
- One week after completing a trip booked through the app, a rider would receive an email message explaining the survey and inviting them to participate in the survey and including a link to the agency's Mobility On-Demand survey.

Since the Via app programming was not able to turn off the message on weekends or non-survey days, a message was added to the survey to request only weekday Mobility On-Demand trips. In the case of ZIPZONE, the language included stated the following: "If you are currently making a WEEKDAY ZIPZONE
then answer based on this trip. If not, please recall your most recent weekday one-way trip using ZIPZONE and answer based on that trip."

The survey went live on October 24, 2022. On November 17, 2022, the survey In-App and e-mail messaging was turned off since the survey goals had been reached for each agency, and the project team wanted to avoid responses that includes non-regular travel, such as Thanksgiving travel, being included in the survey.

## Spring 2023 Data Collection

DART GoLink was surveyed in spring 2023. At the time of the survey, people wishing to book a DART GoLink trip could book the GoLink service in three ways: over the phone, through the Uber App using a special code, and through the GoPass App. Through the GoPass App, people could ride a GoLink vehicle or could choose to use Uber for their GoLink ride. The only people that could be reached for the survey are those who booked over the phone or through the GoPass app and used a GoLink vehicle for their trip.

There were three different phases for the Spring 2023 Mobility On-Demand survey. The first phase was conducted during the Origin and Destination (OD) survey and included sending the survey link through the app at the time a respondent booked the trip. Passengers who booked a Mobility On-Demand trip were asked if they would be willing to participate in the survey and if the passenger answered yes, they were redirected to the self-administered online link.

When the number of surveys collected seemed to stagnate, the second phase involved more marketing of the survey through the following methods:

1) Placing signs onboard dedicated on-demand vehicles that contained a $Q R$ code linking the passenger to the survey.
2) Drivers handed out cards that contained a QR code linking the passenger to the survey.
3) For those booking via phone, the on-hold message mentioned the survey and provided a survey link/phone number.
4) Reminding people of the survey on on-demand vehicles through social media.

The third phase of recruitment involved targeted surveying in the field onboard vehicles and at rail platforms, and Mobility On-Demand zones where survey goals had not been reached and which had dedicated vehicles for Mobility On-Demand services. Survey onboard vehicles also took place on West Dallas Circuit, since they did not use the same app to book as other GoLink zones. Survey goals were reached by June 2,2023 and the data collection ended.

## Data Quality Assurance

Once collected, the data went through the same quality control process that was specified in Chapter 2 for the Regional On-Board Survey fixed route data collection.

In addition, there was an extra process needed to identify the on-demand zone(s) that were used by the respondent. This process involved connecting the boarding and alighting locations specified in the on-line survey against the on-demand zone shapefiles and zone anchor point information provided by each transit agency. Even in cases where surveys were collected on-board vehicles, this process allowed checking if multiple on-demand zones were used to complete the one-way trip.

## Data Expansion

The cleaned survey records were expanded to the total on-demand ridership of the zone or zone group during the survey time frame. The unlinked weight factor was calculated as the total ridership of the zone or zone group divided by the total number of surveys for that zone or zone group. Where enough surveys were collected, survey records were expanded by on-demand zone by time-of-day period. Arlington Via, DCTA GoZone, and Trinity Metro ZipZone were expanded to October 2022 weekday ridership, and DART GoLink was expanded to April 23 weekday ridership.

## Lessons Learned

Some things that the team noticed during the Mobility On-Demand data collection were the following:

- Via messaging worked for this project, but it is important to be aware of other in-app messages taking place during the time of the survey. For example, other in-app messages on the transit agency apps invited riders to participate in other surveys, tip drivers, and provide app feedback. The project team did have concerns about user fatigue towards in-app messages.
- It is important to have testers for these surveys including employees who use the service and can verify receipt of messages.
- Questions still remain on why the response rate was lower on DART than the other on-demand services. In addition, DART GoLInk had lower response rates from users of iOS vs users of Android devices.

## Regional Mobility On-Demand Data Analysis

In this section, the ridership profile and trip profiles data tables have been created for the Regional Mobility On-Demand service that were part of the 2022-2023 North Central Texas Regional Transit Onboard Survey. The weight and percent weight columns use the unlinked weight of riders, unless otherwise specified.

Some notable findings for regional Mobility On-Demand section are the following:

- Age: Over $45 \%$ of riders are aged 25-44.
- Income: Over $52 \%$ of riders have income less than $\$ 33,000$.
- Household Vehicles: $49.2 \%$ of riders do not have a vehicle available to their household.
- Employment: 72.4\% are employed full-time or part-time.
- School: 28.3 attend college/university, K-12, or vocational/ technical/trade school.
- Trip Purpose:
- Over half of riders were surveyed on work-related trips. $42.1 \%$ were surveyed on homebased work trips, and another $9.5 \%$ were surveyed on non-home-based work trips.
- $9.8 \%$ were surveyed on home-based education college trips.
- Mode:
- Access Mode: Over $93 \%$ of Mobility On-Demand walked from their origin to access transit.
- Egress Mode: Over 93\% of Mobility On-Demand walked from their last transit vehicle to their destination.
- Trip Mode: 72\% of riders were surveyed on trips that used on-demand vehicles only.
- Wait Time: 56.9\% waited 10 minutes or less for their Mobility On-Demand vehicle.
- Same Trip:
- $68 \%$ of riders will make the same trip on two or more weekdays each week.
- Two-thirds of riders will make the trip in the opposite direction on the same day.

## Regional Mobility On-Demand Ridership Profile

Table 100: Gender - Regional Mobility On-Demand
49.7\% of On-Demand riders are male. $46.2 \%$ are female.

| Gender | Count | \% Count | Weight | \% Weight |
| :--- | ---: | ---: | ---: | ---: |
| Female | 713 | $46.5 \%$ | 4,081 | $46.2 \%$ |
| Male | 752 | $49.0 \%$ | 4,388 | $49.7 \%$ |
| Other | 23 | $1.5 \%$ | 97 | $1.1 \%$ |
| Prefer not to say | 46 | $3.0 \%$ | 268 | $3.0 \%$ |
| Grand Total | 1,534 | $100.0 \%$ | 8,833 | $100.0 \%$ |

Table 101: Age - Regional Mobility On-Demand
$26.2 \%$ of riders are between 25 and 34 years old. Over $47 \%$ of riders are age 35 or older.

| Age | Count | \% Count | Weight | \% Weight |
| :--- | ---: | ---: | ---: | ---: |
| Under 18 | 58 | $3.8 \%$ | 307 | $3.5 \%$ |
| $18-19$ | 121 | $7.9 \%$ | 637 | $7.2 \%$ |
| $20-24$ | 290 | $18.9 \%$ | 1,414 | $16.0 \%$ |
| $25-34$ | 387 | $25.2 \%$ | 2,312 | $26.2 \%$ |
| $35-44$ | 274 | $17.9 \%$ | 1,734 | $19.6 \%$ |
| $45-54$ | 170 | $11.1 \%$ | 1,068 | $12.1 \%$ |
| $55-64$ | 128 | $8.3 \%$ | 774 | $8.8 \%$ |
| $65+$ | 106 | $6.9 \%$ | 587 | $6.6 \%$ |
| Grand Total | 1,534 | $100.0 \%$ | 8,833 | $100.0 \%$ |

## Table 102: Ethnicity/Race - Regional Mobility On-Demand

Riders were asked to specify all of the ethnicity/races that apply to them. 38.7\% of riders are Black/African American. 30.9\% are White/Caucasian. 16.5\% are Hispanic/Latino.

| Ethnicity/Race | Count | \% Count | Weight | \% Weight |
| :--- | ---: | ---: | ---: | ---: |
| American Indian/Alaskan Native | 44 | $2.9 \%$ | 288 | $3.3 \%$ |
| Asian/Indian | 262 | $17.1 \%$ | 1,399 | $15.8 \%$ |
| Black/African American | 522 | $34.0 \%$ | 3,417 | $38.7 \%$ |
| Hispanic/Latino | 254 | $16.6 \%$ | 1,477 | $16.7 \%$ |
| Native Hawaiian/Pacific Islander | 10 | $0.7 \%$ | 74 | $0.8 \%$ |
| White/Caucasian | 537 | $35.0 \%$ | 2,734 | $30.9 \%$ |
| Two or more Races/Ethnicities | 104 | $6.8 \%$ | 576 | $6.5 \%$ |

Table 103: Household Income - Regional Mobility On-Demand
$25.0 \%$ of riders have an annual household income of less than $\$ 15,000.52 .4 \%$ of riders have an annual household income of less than \$33,000.

| Household Income | Count | \% Count | Weight | \% Weight |
| :--- | ---: | ---: | ---: | ---: |
| Less than \$15,000 | 423 | $27.6 \%$ | 2,211 | $25.0 \%$ |
| $\$ 15,000-\$ 19,999$ | 130 | $8.5 \%$ | 686 | $7.8 \%$ |
| $\$ 20,000-\$ 21,999$ | 84 | $5.5 \%$ | 505 | $5.7 \%$ |
| $\$ 22,000-\$ 24,999$ | 57 | $3.7 \%$ | 390 | $4.4 \%$ |
| $\$ 25,000-\$ 27,999$ | 59 | $3.8 \%$ | 359 | $4.1 \%$ |
| $\$ 28,000-\$ 32,999$ | 75 | $4.9 \%$ | 476 | $5.4 \%$ |
| $\$ 33,000-\$ 34,999$ | 44 | $2.9 \%$ | 280 | $3.2 \%$ |
| $\$ 35,000-\$ 39,999$ | 73 | $4.8 \%$ | 417 | $4.7 \%$ |
| $\$ 40,000-\$ 44,999$ | 54 | $3.5 \%$ | 346 | $3.9 \%$ |
| $\$ 45,000-\$ 49,999$ | 34 | $2.2 \%$ | 207 | $2.3 \%$ |
| $\$ 50,000-\$ 54,999$ | 37 | $2.4 \%$ | 228 | $2.6 \%$ |
| $\$ 55,000-\$ 59,999$ | 19 | $1.2 \%$ | 133 | $1.5 \%$ |
| $\$ 60,000-\$ 64,999$ | 38 | $2.5 \%$ | 235 | $2.7 \%$ |
| $\$ 65,000-\$ 74,999$ | 32 | $2.1 \%$ | 189 | $2.1 \%$ |
| $\$ 75,000-\$ 79,999$ | 25 | $1.6 \%$ | 168 | $1.9 \%$ |
| $\$ 80,000-\$ 99,999$ | 37 | $2.4 \%$ | 187 | $2.1 \%$ |
| $\$ 100,000-\$ 149,999$ | 34 | $2.2 \%$ | 235 | $2.7 \%$ |
| $\$ 150,000$ or more | 28 | $1.8 \%$ | 148 | $1.7 \%$ |
| Refused | No Answer |  | 251 | $16.4 \%$ |
| Grand Total | 1,534 | $100.0 \%$ | 8,833 | $16.2 \%$ |

Table 104: Household Size - Regional Mobility On-Demand
$25.7 \%$ of riders live in a household with one other person, and $22.5 \%$ of riders live alone. $17.2 \%$ of riders live in a household with two other people, and $17.2 \%$ live in a household with three other people.

| Household Size | Count | \% Count | Weight | \% Weight |
| :--- | ---: | ---: | ---: | ---: |
| One (1) | 360 | $23.5 \%$ | 1,990 | $22.5 \%$ |

## APPENDIX A: Survey Instrument (Paper)

Figure 21: NCT 2022-2023 On-Board Paper Survey (PG 1)

2022-2023 Regional Transit On-Board Survey
Please take a few minutes to answer a few questions to help us plan for your transit

Are you a visitor to the D/FW area? O Yes O No
DART

Figure 22: Dart Bus On-Board Paper Survey Pt. 2

OTHER TNFORMATION ABOUT THIS TRTP
12. What time did you BOARD this bus/train?
13. How long (in minutes) were you waiting at the bus stop for this am/pm (circle one)
14. How often do you use public transit on weekdays?
$\begin{array}{lll}\text { O every weekday } & \text { O 2-4 times/week } & \text { O once/week } \\ 0 \text { 2-3 times/month } & \text { O once/month } & \text { ○ less than once/month }\end{array}$
15. How often do you make a transit trip between this starting point and destination on weekdays?
O every weekday O 2-4 times/week Once/week

O 2-3 times/month O once/month less than once/month
16. Will you (or did you) make this transit trip in the opposite direction today?

O No $O$ Yes
17. What did you use to plan this trip?

| O Use paper schedules | O Call Customer Service O Go Pass App | O Google Maps |
| :--- | :--- | :--- |
| O Apple Maps | O Transit Agency On-line Trip Planner | O Did not do any trip planning |
| O Other: |  |  |

o Other:
O Transit Agency On-line Trip Planner
O Did not do any trip planning

## PAYMENT

18. What kind of pass did you use for this trip?

O Local O Regional OStudentID
18a. Was it: O Reduced O DART Employer/School pass
19. How long is your pass good for?

O Single Ride(would be used on Dallas Streetcar, GoLink, and bus only trips) O AM/PM pass O Midday pass $\bigcirc$ Day pass $O$ Monthly (31 Day pass) O Annual pass
20. How did you pay for your pass?

O Cash O Credit/Debit card ○GoPass App OGoPass Tap card OSmartPhone/Digital Wallet O Payroll deduction O Gift/Free/No Charge
20a. How do you reload your GoPass Tap card? O Website O Retail O Phone
21. Where did you get your pass for this trip?

| O On the bus | O Ticket Vending Machine | O Downtown Denton Transit Center |
| :--- | :--- | :--- |
| O Trinity Metro Central Station | O DART Store | O Public agency (social services) |
| O Go Pass Mobile Application | O Transit agency website | O Sales outlet (like a grocery store) |
| O Go Zone App | O School/university/Employer | O Other |

O Go Pass Mobile Application O Transit agency website
O Public agency (social services)
O Sales outlet (like a grocery store)

## ABOUT YOU AND YOUR HOUSEHOLD

22. How many vehicles (cars, trucks, or motorcycles) are available to your household? $\qquad$ vehicles 22a. [If \#22 is more than NONE] Could you have used one of these vehicles for this trip? OYes ONo
23. Including YOU, how many people live in your household? $\qquad$ people
24. Including YOU, how many people (age 18+) live in your household? $\qquad$ people
25. Including YOU, how many people (over age 15) in your household are employed full/part-time? $\qquad$ people
26. Are you: (check the one response that BEST describes you) O Employed full-time
O Not currently employed but seeking work
O Employed part-time O Retired

O Not currently employed and not seeking work
O Homemaker
27. Are you a student? (check the one response that BEST describes you)
O Not a student
O Yes - college/university
Yes $-\mathrm{K}-12^{\text {th }}$ grade

27a. [If \#27 is Yes-college/university/vocational/technical/trade]
Please specify your college/university name:
28. Do you have a valid driver's license? OYes ONo
29. Do you have a disability that limits your mobility? OYes ONo
30. What is your AGE? OUnder 18 O 18-19 O20-24 O25-34 $\quad$ O35-44 $\quad$ O45-54 $\quad$ O55-64 O65+
31. Are you? (check all that apply) O American Indian/Alaska Native

O Asian/Indian
O Black/A $\qquad$
32. What is your gender? O Male O Female O Other O Refused
33. Which of the following BEST describes your TOTAL ANNUAL HOUSEHOLD INCOME in 2021 before taxes?

- $\$ 0-\$ 15,000$
BEST describes your TOTAL ANNUAL HOUSEHOLD INCOME in 2021 before taxes?
$0 \$ 15,000-\$ 19,999$
\$25,000-\$27,999
\$ $40,000-\$ 44,999$
- 
- \$33,000-\$21,999
\$35,000 - \$24,999
\$40,000-\$44,999 O \$45,000-\$49,999
- \$100,000-\$149,999
\$150,000 \$74,999

| ○ $\$ 50,000-\$ 54,999$ |
| :--- |

| O $\$ 55,000-\$ 59,999$ |
| :--- |

34. Do you speak a language other than English at home? O No OYes - Which language? IF YES: How well do you speak English? O Very Well ○ Well O Less than well ONot at all
35. Do you carry the following: O Cell Phone O Smart Phone O Neither O Both
36. Would you be willing to participate in future transportation surveys? OYes O No Your Name:

Phone Number:
E-mail address:

## REGISTER TO WIN \$100

People who submit an accurately completed survey will be entered in a random drawing for one of TWENTY $\$ 100$ cash prizes. You must provide your home address at the beginning of the survey to be eligible.

DART requested that the following four market segmentation provided in Figure 18 be included in the survey. To minimize the respondent burden, they were only offered to every $5^{\text {th }}$ person that was surveyed on a DART route or TRE.

Figure 27: DART Market Segmentation Questions: QUESTIONS 37-40
37. Which of the following describes you best?
(1) DART is my primary means of transportation
(2) I ride DART, but I also have other means of transportation
(3) I have ridden DART, but I do not ride frequently
(4) I do not ride DART and/or have not ridden in the past year
38. What is the PRIMARY purpose for which you use (or may use) DART? [check one]
(1) To and from work (3) Medical (5) Special events
(2) School/College (4) Shopping/Errands (6) Casual outing/entertainment
(7) Other: $\qquad$
39. What is the PRIMARY reason you use (or may use) DART for your transportation needs? [check one]
(1) DART is my only transportation option
(2) Avoid traffic/parking stressors
(3) Better for the environment
(4) Safer than driving myself
(5) Cheaper than driving myself
(6) My company pays for it
(7) Gives me time to work/read
(8) Less wear and tear on my personal vehicle
(9) Other: $\qquad$
40. In your opinion, what are the three most critical problems that DART needs to solve today? Please CIRCLE your top 3 choices.
(01) Lack of cleanliness on trains/buses and on stations/stops
(02) Hassling from panhandlers
(03) TVM (Ticket Vending Machine) malfunctions
(04) Safety issues
(05) Limited service frequency, hours of operation or geographic coverage
(06) Inconvenient or no transportation to/from the train station/bus stop
(07) Rude or inconsiderate train/bus operators
(08) Unreliable train or bus service
(09) Not enough updates regarding service delays or disruptions
(10) Other: $\qquad$

## 2022-2023 GoLink Survey

Please take a few minutes to answer a few questions to help us plan for your transit needs.

## All personal information will be kept strictly confidential and WILL NOT be shared or sold.

Are you a visitor to the D/FW area? O Yes O No
What is your HOME ADDRESS (please be specific, ex: 123 W . Main St):
(If you are visiting the Dallas/Fort Worth area, please list the hotel name or address where you are staying)

## Street Address

## COMING FROM?

1. What type of place are you COMING FROM NOW?
(the starting place for your one-way trip)
O Your HOME $\rightarrow$ Go to Question \#4
O Hotel or Lodging

- Your usual WORKPLACE
- Other business related
- College / University (student only)

O School (K-12) (student only)
O Medical appointment/doctor's visit

- Social visits (friends/relatives)

O Social visits (friends/relatives)

- Pick up/drop off someone (daycare, school)
- Other:

O Shopping
O Eating/Dining Out

- Recreation
- Sporting event
- Sightseeing

2. What is the NAME of the place you are coming from now?
3. What is the EXACT ADDRESS of this place? (OR Intersection if you do not know the exact address:)

City: $\qquad$ zip: $\qquad$
4. How did you GET FROM your origin (the place in Question \#1) TO THE VERY FIRST transit vehicle you used for this

## one-way trip?

- Walk - How far did you walk? ___ minutes

O Wheelchair $\quad$ O Electric Scooter

- Personal Bike ○ Bike Share
- Uber, Lyft, etc. (answer 4a) O Taxi (answer 4a)
- Was dropped off by someone going someplace else (answer 4a)
- Drove alone and parked (answer 4a)
o Drove or rode with others and parked (answer 4a)
4a. Where did you board the first transit vehicle you used for this one-way trip (Nearest intersection / rail station / transfer center / park and ride):

5. Where did you get ON this vehicle? Please provide the nearest intersection / rail station / transfer center / park and ride:
City $\quad$ Zip Code

## GOING TO?

6. What type of place are you

## GOING TO NOW?

(the destination for your one-way trip)

- Your HOME $\rightarrow$ Go to Question \#9

O Hotel or Lodging
O Your usual WORKPLACE
O Other business related
O School (K-12) (student only)

- Airport (airline passenger only)

O Medical appointment/doctor's visit
O Social visits (friends/relatives)
O Personal business (bank, post office)
O Pick up/drop off someone (daycare, school)
O Other:
7. What is the NAME of the place you are going to now?
8. What is the EXACT ADDRESS of this place? (OR Intersection if you do not know the
exact address:) exact address:)

City: $\qquad$ Zip: $\qquad$
9. How will you GET TO your destination (listed in Question \#6) after you exit the LAST bus/train/streetcar you will use for this one-way trip?
$\begin{array}{ll}\text { O Walk-How far did you walk? } & \text { minutes } \\ \text { O Wheelchair } & \text { Electric Scooter } \\ \text { O Personal Bike } & \text { O Bike Share }\end{array}$
O Uber, Lyft, etc. (answer 9a) ○ Taxi (answer 9a)

- Be picked up by someone going someplace else (answer

9a)
O Get in a parked vehicle and drive alone (answer 9a)
O Get in a parked vehicle and drive/ride with others (answer
9a)
9a. Where will you get off the last transit vehicle you are using for this one-way trip (Nearest intersection / rail station / transfer center / park and ride):
10. Where will you EXIT this vehicle? Please provide the nearest intersection / rail station/ transfer center / park and ride:

- Shopping

O Eating/Dining Out
O Eating/Dining
O Sporting event
O Sporting event
O Sightseeing ity:

E-mail address:

Figure 67: Spring 23 DART GoLink Survey Instrument - Page 3
37. Which of the following describes you best?
(1) DART is my primary means of transportation
(2) I ride DART, but I also have other means of transportation
(3) I have ridden DART, but I do not ride frequently
(4) I do not ride DART and/or have not ridden in the past year
38. What is the PRIMARY purpose for which you use (or may use) DART? [check one]
(1) To and from work (3) Medical (5) Special events
(2) School/College (4) Shopping/Errands (6) Casual outing/entertainment
(7) Other: $\qquad$
39. What is the PRIMARY reason you use (or may use) DART for your transportation needs? [check one]
(1) DART is my only transportation option
(2) Avoid traffic/parking stressors
(3) Better for the environment
(4) Safer than driving myself
(5) Cheaper than driving myself
(6) My company pays for it
(7) Gives me time to work/read
(8) Less wear and tear on my personal vehicle
(9) Other: $\qquad$
40. In your opinion, what are the three most critical problems that DART needs to solve today? Please CIRCLE your top 3 choices.
(01) Lack of cleanliness on trains/buses and on stations/stops
(02) Hassling from panhandlers
(03) TVM (Ticket Vending Machine) malfunctions
(04) Safety issues
(05) Limited service frequency, hours of operation or geographic coverage
(06) Inconvenient or no transportation to/from the train station/bus stop
(07) Rude or inconsiderate train/bus operators
(08) Unreliable train or bus service
(09) Not enough updates regarding service delays or disruptions
(10) Other: $\qquad$

## APPENDIX C: Sample Plans
