

TMDL Best Management Practices Library Resource Center Form

The primary method to control pollutant runoff into impaired water bodies is the use of best management practices (BMPs). Total Maximum Daily Loads (TMDLs) BMPs are devices, practices, or methods that are used to manage pollutants below TMDL limits. The North Central Texas Council of Governments (NCTCOG) is collaborating with regional stakeholders to compile a database of resources that will help expand adoption of BMPs for TMDLs.

Please complete the following form for any BMPs you may have developed or use in the 9 major categories listed below. Contact Erin Kelly (ekelly@nctcog.org) with any additional questions. Please refer to the link below for the current Implementation Plan for the Upper Trinity River

http://www.nctcog.org/envir/SEEclean/wq/tmdl/TrinityI-Plan_Approved_Dec2013.pdf

1. TMDL BMP Resource Topics(s). Please select the topic(s) relevant to the source you are submitting.
