

Energy Efficiency Funding Panel

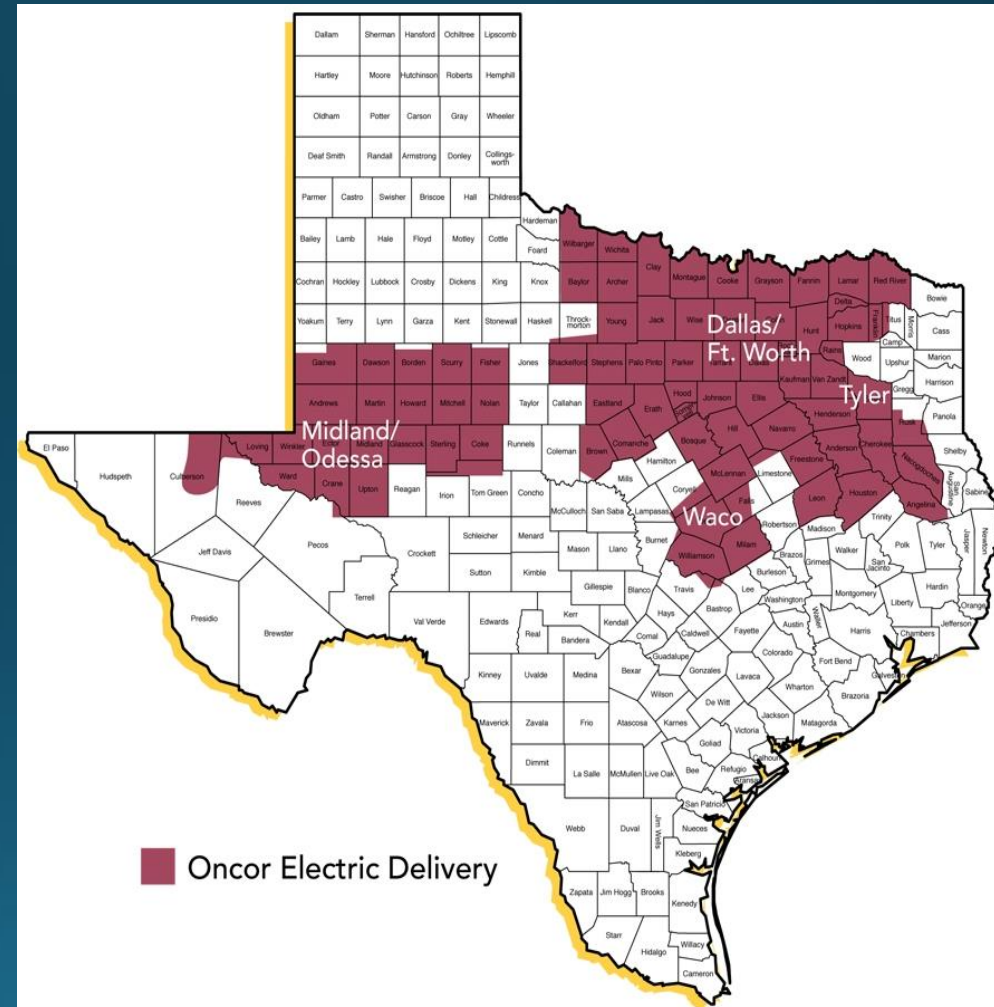

Heather Lepaska (City of Dallas)
Jeff Reed (Oncor Electric Delivery)
Eddy Trevino (State Energy Conservation Office)
James Armstrong (Community Action Partners Weatherization Assistance Program)

Moderated by: Chad Nobles (Siemens)

North Central Texas Energy Forum
October 26, 2016

Program Overview

- Oncor is Texas's largest regulated electric delivery business in Texas
- Oncor supplies electricity to approximately 10 million consumers in a service area of over 400 communities
- Operates in the U.S.'s highest-growth region in electric demand, according to the North American Electric Reliability Council (NERC)

Program Overview

1. Energy efficiency is deemed to be one of the most cost effective “sources” of energy.
 - The cost of saving a kW or kWh is less than the cost of producing a kW or kWh (“cost effectiveness”)
2. In past years the electricity generation capacity during peak times has not always met the demand. Future demand will continue to rise due to growth.
3. Energy efficiency programs help create demand and supply of new technologies to encourage “early” adoption.
4. Energy efficiency programs spur changes in new building codes as technologies become more readily available and affordable.

Programs Overview

Commercial Programs	Residential Programs
Basic Commercial Standard Offer Program	Home Energy Efficiency Program
Custom Commercial Standard Offer Program	Low-Income Weatherization Program
Commercial Solar Program	Residential Solar Program
Commercial Load Management Program	Targeted Low-Income Program
Small Business Direct Install Program (called Open)	Residential Demand Response

ENERGY EFFICIENCY TIPS

Water

Fix leaking faucets. They can cost you 20 gallons of water a day.

[Learn more](#)

Oncor offers several energy efficiency incentive programs. These programs help residential consumers, business owners and government and educational facilities jump-start their energy efficiency efforts.
